Liquid Natural Gas in the United States John Hrastar,2014-06-24 When natural gas was first discovered in Appalachia in the 19th century its development as a fuel was rapid Unlike oil and coal gas could be moved only by pipeline and required large containers for storage It was not possible to cope with peak loads without adding excessive pipeline capacity until just before World War II when two sister gas companies developed a plant to liquefy and store natural gas as a liquid the liquid was then regasified to deal with peak loads The liquid is 1 600 the volume of the gas but it requires storage at an extremely low temperature 1 260 F This worked well until 1944 when a liquid natural gas LNG tank in Cleveland ruptured and caused a fire with 130 fatalities The fire did not end the industry but caused it to pause Over the next few years the problems in materials design standards and siting were solved The recognition that liquefaction made LNG transportable without a pipeline was the breakthrough In 1959 a shipload of LNG went from Louisiana to Britain and restarted the LNG industry It is now a major worldwide energy industry and the topic of this work

Natural Gas Annual 2004 , Monthly Energy Review: February 2005 , **Beyond Oil and Gas** George A. Olah,Alain Goeppert,G. K. Surya Prakash,2011-08-24 The world is currently consuming about 85 million barrels of oil a day and about two thirds as much natural gas equivalent both derived from non renewable natural sources In the foreseeable future our energy needs will come from any available alternate source Methanol is one such viable alternative and also offers a convenient solution for efficient energy storage on a large scale In this updated and enlarged edition renowned chemists discuss in a clear and readily accessible manner the pros and cons of humankind s current main energy sources while

providing new ways to overcome obstacles Following an introduction the authors look at the interrelationship of fuels and energy and at the extent of our non renewable fossil fuels They also discuss the hydrogen economy and its significant shortcomings The main focus is on the conversion of CO₂ from industrial as well as natural sources into liquid methanol and related DME a diesel fuel substitute that can replace LNG and LPG The book is rounded off with an optimistic look at future possibilities A forward looking and inspiring work that vividly illustrates potential solutions to our energy and environmental problems
