Low Energy Ion Beam and Plasma Modification of Materials: Volume 223 James M. E. Harper, 1991-08-16 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

Application of Particle and Laser Beams in Materials Technology P. Misaelides, 1995-01-31 The development of advanced materials with preselected properties is one of the main goals of materials research. Of especial interest are electronics, high temperature and superhard materials for various applications as well as alloys with improved wear, corrosion and mechanical resistance properties. The technical challenge connected with the production of these materials is not only associated with the development of new specialised preparation techniques but also with quality control. The energetic charged particle, electron and photon beams offer the possibility of modifying the properties of the near surface regions of materials without seriously affecting their bulk and provide unique analytical tools for testing their quality. *Application of Particle and Laser Beams in Materials Technology* provides an overview of this rapidly expanding field. Fundamental aspects concerning the interactions and collisions on atomic, nuclear and solid state scale are presented in a didactic way along with the application of a variety of techniques for the solution of problems ranging from the development of electronics materials to corrosion research and from archaeometry to environmental protection. The book is divided into six thematic units: Fundamentals, Surface Analysis Techniques, Laser Beams in Materials Technology, Accelerator Based Techniques in Materials Technology, Materials Modification and Synchrotron Radiation. **Ion-Solid Interactions** Michael Nastasi, James W.
