Ludwig Boltzmann His Later Life and Philosophy, 1900-1906 J.T. Blackmore, 2013-03-09 2 But already he had done important work on thermal equilibrium which helped generalize Maxwell's distribution law Indeed there is part of a letter by James Clerk Maxwell to Loschmidt from this period which runs I am very pleased over the outstanding work of your student in England experimental physics is much neglected Sir William Thomson has done the most in this connection but you in Austria are ahead of us with your good example 2 But while praise was fine Boltzmann lusted after further travel He wanted to know what other physicists were doing first hand In 1870 he attended lectures by Bunsen and Königsberger in Heidelberg and in the same year went to Berlin only to scurry back to Vienna with the outbreak of the Franco Prussian War but Boltzmann was back in Berlin the next year attending lectures visiting laboratories and working on dielectricity more or less under the direction of Kirchhoff and Helmholtz

John von Neumann and the Foundations of Quantum Physics

Miklós Rédei, Michael Stöltzner, 2013-03-09 John von Neumann 1903 1957 was undoubtedly one of the scientific geniuses of the 20th century The main fields to which he contributed include various disciplines of pure and applied mathematics mathematical and theoretical physics logic theoretical computer science and computer architecture Von Neumann was also actively involved in politics and science management and he had a major impact on US government decisions during and especially after the Second World War There exist several popular books on his personality and various collections focusing on his achievements in mathematics computer science and economy Strangely enough to date no detailed appraisal of his seminal contributions to the mathematical foundations of quantum physics has appeared Von Neumann's theory of measurement and his critique of hidden variables became the touchstone of most debates in the foundations of quantum mechanics Today his name also figures most prominently in the mathematically rigorous branches of contemporary quantum mechanics of large systems and quantum field theory And finally as one of his last lectures published in this volume for the first time shows he considered the relation of quantum logic and quantum mechanical probability as his most important problem for the second half of the twentieth century The present volume embraces both historical and systematic analyses of his methodology of mathematical physics and of the various aspects of his work in the foundations of quantum physics such as theory of measurement quantum logic and quantum mechanical entropy The volume is rounded off by previously unpublished letters and lectures documenting von Neumann's thinking about quantum theory after his 1932 Mathematical Foundations of Quantum Mechanics The general part of the Yearbook contains papers emerging from the Institute's annual lecture series and reviews of important publications of philosophy of science and its history

Leibniz's Metaphysics of Time and Space Michael Futch, 2008-04-05 Leibniz's metaphysics of space and time stands at the centre of his philosophy and is one of the high water marks in the history of the philosophy of science In this work Futch provides the first systematic and comprehensive examination of Leibniz's thought on this subject In addition to elucidating the nature of Leibniz's relationalism the book fills a lacuna in existing scholarship by examining his views on the topological structure of space and time including the unity and unboundedness of space and time It is shown that like many of his more recent counterparts Leibniz adopts a causal theory of time where temporal facts are grounded on causal facts and that his approach to time represents a precursor to non tensed theories of time Futch then goes on to situate Leibniz's philosophy of space and time within the broader context of his idealistic metaphysics and natural theology Emphasizing the historical background of Leibniz's thought the book also places him in dialogue with contemporary philosophy of science underscoring the enduring philosophical interest of Leibniz's metaphysics of time and space

Plant Breeding and Agrarian Research in Kaiser-Wilhelm-Institutes 1933-1945 Susanne Heim, 2008-03-27 A history of the agricultural sciences in Nazi Germany is presented in this book The book analyzes scientific practice under the Nazi regime Nazi agricultural policy and autarkic strategies and the expansion policy in Eastern Europe It offers new insights into the Auschwitz concentration camp and new perspectives on the cooperation between German elite scientists and the Nazi regime The book goes on to dismiss the assumption that Aryan physics were typical for Nazi Germany

Einstein's Generation Richard Staley, 2008 Einstein's Generation offers a new approach to the origins of modern physics by exploring both the material culture that stimulated relativity and the reaction of Einstein's colleagues to his pioneering work

Potentiality, Entanglement and Passion-at-a-Distance Robert S. Cohen, M. Horne, J.J. Stachel, 1997-06-30 Potentiality Entanglement and Passion at a Distance is a book for theoretical physicists and philosophers of modern physics It treats a puzzling and provocative aspect of recent quantum physics the apparent interaction of certain physical events that cannot share any causal connection These are said to be entangled in some way but an explanation remains elusive Abner Shimony to whom the book is dedicated and others suggest the need to revive the category of what may be seen as a metaphysical potentiality Abner has described these events without actions to link them as passion at a distance not active but passive The discussions gathered here are written by a truly remarkable cast of scientists and philosophers and shed new light on the most profound puzzles of our times

History of Science, History of Text
Karine Chemla, 2004 This book explores the hypothesis that the types of inscription or text used by a given community of practitioners are designed in the very same process as the one producing concepts and results The book sets out to show how in exactly the same way as for the other outcomes of scientific activity all kinds of factors cognitive as well as cultural technological social or institutional conjoin in shaping the various types of writings and texts used by the practitioners of the sciences To make this point the book opts for a genuinely multicultural approach to the texts produced in the context of practices of knowledge It is predicated on the conviction that in order to approach any topic in the history of science from a theoretical point of view it may be fruitful to consider it from a global perspective The book hence does not only gather papers dealing with geometrical papyri of antiquity sixteenth century French books in algebra seventeenth century scientific manuscripts and paintings eighteenth and nineteenth century memoirs published by European academies or scientific journals and Western Opera Omnia It also considers the problems of interpretation relating to reading Babylonian clay tablets Sanskrit oral scriptures and Chinese books and illustrations Thus it enables the reader to explore the diversity of forms which texts have taken in history and the wide range of uses they have inspired This volume will be of interest to historians philosophers of science linguists and anthropologists

Rethinking Scientific Change and Theory Comparison:
Léna Soler, H. Sankey, Paul Hoyningen-Huene, 2008-05-29 L NA SOLER This volume is a collection of essays devoted to the analysis of scientific change and stability It represents the most recent thinking on the topic of incommensurability and scientific theory change It explores the balance and tension that exists between commensurability and continuity or stabilities on the one hand and incommensurability and discontinuity or ruptures on the other And it discusses some central epistemological consequences regarding the nature of scientific progress rationality and realism With respect to these topics it investigates a number of new avenues and revisits some familiar issues with a focus on the history and philosophy of

physics in a way that is informed by developments in cognitive sciences as well as the claims of New experimentalists The essays in this book are fully revised versions of papers which were originally presented at the international colloquium Repenser l'valuation comparative des thories scientifiques stabilit s ruptures incommensurabilit s organized by L na Soler and Paul Hoyningen Huene at the University of Nancy France in June 2004 Each paper is followed by a critical comment which either represents an opposing viewpoint or suggests some developments The conference was a striking example of the sort of genuine dialogue that can take place between philosophers of science historians of science and scientists who come from different traditions and endorse opposing commitments I hope that this is evident in the book too and that it will constitute one of its attractions Boston Studies in the Philosophy of Science ,2004 **Experimental Metaphysics**

Québec Studies in the Philosophy of Science Mathieu Marion,Robert S. Cohen,1996 By North American standards philosophy is not new in Quebec the first mention of philosophy lectures given by a Jesuit in the College de Quebec founded 1635 dates from 1665 and the oldest logic manuscript dates from 1679 In English speaking universities such as McGill founded 1829 philosophy began to be taught later during the second half of the 19th century The major influence on English speaking philosophers was at least initially that of Scottish Empiricism On the other hand the strong influence of the Catholic Church on French Canadian society meant that the staff of the facultes of the French speaking universities consisted until recently almost entirely of Thomist philosophers There was accordingly little or no work in modern Formal Logic and Philosophy of Science and precious few contacts between the philosophical communities In the late forties Hugues Leblanc was a young student wanting to learn Formal Logic He could not find anyone in Quebec to teach him and he went to study at Harvard University under the supervision of W V Quine His best friend Maurice L Abbe had left a year earlier for Princeton to study with Alonzo Church After receiving his Ph D from Harvard in 1948 Leblanc started his professional career at Bryn Mawr College where he stayed until 1967 He then went to Temple University where he taught until his retirement in 1992 serving as Chair of the Department of Philosophy from 1973 until 1979 **International Bibliography of Book Reviews**
