constitute the thoroughly refereed post conference proceedings of the International IFIP WG 5 7 Conference on Advances in Production Management Systems APMS 2012 held in Rhodes Greece in September 2012 The 182 revised full papers were carefully reviewed and selected for inclusion in the two volumes They are organized in 6 parts sustainability design manufacturing and production management human factors learning and innovation ICT and emerging technologies in production management product and asset lifecycle management and services supply chains and operations

[Advanced Models for Manufacturing Systems Management](#) A Villa,1995-09-19 This book presents the mathematical models applicable to manufacturing systems management covering problems from production to real time control It explores manufacturing systems from the viewpoints of both physical structure and performance measures Two broad classes of mathematical

models are covered in detail Generative models which yield a set of decision variables optimizing a performance measure based on mathematical optimization Evaluative models which evaluate some performance measures as a function of some predefined decision strategy Within this class Petri Nets and Queueing Networks are discussed Advanced Models for Manufacturing Systems Management describes dynamic systems modeling by state equations a unifying framework for a wide variety of models The text reference stresses model building but it examines model solving as well Computational techniques are illustrated such as linear programming branch and bound methods and dynamic programming Particular emphasis is given to the development of heuristic methods from mathematical models The book provides readers with valuable tools for management and design The use of descriptive models within an optimization algorithm is considered Numerous examples illustrate theoretical concepts throughout text Appendices are given at the end of the book in order to recall fundamentals such as linear programming and graph theory Appendices also appear within each chapter In this way readers can follow the main reading path without getting involved with details these appendices can be read at a later time This textual structure makes this book particularly well suited for self study Advanced Models for Manufacturing Systems Management is beneficial reading for both students and practitioners

### **Introduction to Computational Optimization**

**Models for Production Planning in a Supply Chain** Stefan Voss,David L. Woodruff,2003 The book begins with an easy to read introduction to the concepts associated with the creation of optimization models for production planning These concepts are then applied to well known planning models namely mrp and MRP II From this foundation fairly sophisticated models for supply chain management are developed Another unique feature is that models are developed with an eye toward implementation In fact there is a chapter that provides explicit examples of implementation of the basic models using a variety of popular commercially available modeling languages
