Optimization Software Class Libraries:

Optimization Software Class Libraries Stefan Voß,David L. Woodruff,2005-12-17 Optimization problems in practice are diverse and evolve over time giving rise to requirements both for ready to use optimization software packages and for optimization software libraries which provide more or less adaptable building blocks for application specific software systems. In order to apply optimization methods to a new type of problem corresponding models and algorithms have to be coded so that they are accessible to a computer. One way to achieve this step is the use of a modeling language. Such modeling systems provide an excellent interface between models and solvers but only for a limited range of model types in some cases for example linear due in part to limitations imposed by the solvers. Furthermore while modeling systems especially for heuristic search are an active research topic it is still an open question as to whether such an approach may be generally successful. Modeling languages treat the solvers as a black box with numerous controls. Due to variations for example with respect to the pursued objective or specific problem properties dressing real world problems often requires special purpose methods. Thus we are faced with the difficulty of efficiently adapting and applying appropriate methods to these problems. Optimization software libraries are intended to make it relatively easy and cost effective to incorporate advanced planning methods in application specific software systems. A general classification provides a distinction between callable packages numerical libraries and component libraries.

Advanced Methods and Applications in Computational Intelligence Ryszard Klempous,Jan Nikodem,Witold Jacak,Zenon Chaczko,2013-07-20 This book offers an excellent presentation of intelligent engineering and informatics foundations for researchers in this field as well as many examples with industrial application. It contains extended versions of selected papers presented at the inaugural ACASE 2012 Conference dedicated to the Applications of Systems Engineering. This conference was held from the 6th to the 8th of February 2012 at the University of Technology Sydney Australia organized by the University of Technology Sydney Australia Wroclaw University of Technology Poland and the University of Applied Sciences in Hagenberg Austria. The book is organized into three main parts. Part I contains papers devoted to the heuristic approaches that are applicable in situations where the problem cannot be solved by exact methods due to various characteristics or dimensionality problems. Part II covers essential issues of the network management presents intelligent models of the next generation of networks and distributed systems as well as discusses applications of modern numerical methods in large intractable systems. Part III covers salient issues of complexity in intelligent system applications. This part also contains papers and articles which discuss concurrency issues that arise when multiple systems attempt to use the same radio space and the interconnected system applications in the field of medical simulation and training.

Handbook of Metaheuristics Fred W. Glover,Gary A. Kochenberger,2006-04-11 Metaheuristics in their original definition are solution methods that orchestrate an interaction between local improvement procedures and higher level strategies to create a process capable of escaping from local optima and performing a robust search of a solution.

space Over time these methods have also come to include any procedures that employ strategies for overcoming the trap of local optimality in complex solution spaces especially those procedures that utilize one or more neighborhood structures as a means of defining admissible moves to transition from one solution to another or to build or destroy solutions in constructive and destructive processes The degree to which neighborhoods are exploited varies according to the type of procedure In the case of certain population based procedures such as genetic algorithms neighborhoods are implicitly and somewhat restrictively defined by reference to replacing components of one solution with those of another by variously chosen rules of exchange popularly given the name of crossover In other population based methods based on the notion of path relinking neighborhood structures are used in their full generality including constructive and destructive neighborhoods as well as those for transitioning between complete solutions Certain hybrids of classical evolutionary approaches which link them with local search also use neighborhood structures more fully though apart from the combination process itself

in Software Methodologies, Tools and Techniques A. Selamat,H. Fujita,H. Haron,2014-08-29 Software is the essential enabling means for science and the new economy It helps us to create a more reliable flexible and robust society But software often falls short of our expectations Current methodologies tools and techniques remain expensive and are not yet sufficiently reliable while many promising approaches have proved to be no more than case by case oriented methods This book contains extensively reviewed papers from the thirteenth International Conference on New Trends in software Methodology Tools and Techniques SoMeT_14 held in Langkawi Malaysia in September 2014 The conference provides an opportunity for scholars from the international research community to discuss and share research experiences of new software methodologies and techniques and the contributions presented here address issues ranging from research practices and techniques and methodologies to proposing and reporting solutions for global world business The emphasis has been on human centric software methodologies end user development techniques and emotional reasoning for an optimally harmonized performance between the design tool and the user Topics covered include the handling of cognitive issues in software development to adapt it to the user's mental state and intelligent software design in software utilizing new aspects on conceptual ontology and semantics reflected on knowledge base system models This book provides an opportunity for the software science community to show where we are today and where the future may take us
