## **Optimization Using Personal Computers With Applications To Electrical Networks:**

**Optimization Using Personal Computers** Thomas R. Cuthbert,1987-01-01    **Optimization Using Personal Computers** Thomas Remy Cuthbert,1987 This text for the advanced student illustrates the theory and application of optimization a method of automatically adjusting design variables to improve a result It stresses the application of the method towards the design of electrical circuits and networks and explains the mathematical basis of optimization points out the most successful techniques and develops the skills to read and digest the vast amount of literature written on optimization Thirty three BASIC computer programs in Microsoft R Basic that provide hands on experience with the mathematics and computational procedures of optimization are presented whilst in addition the book shows how to produce useful answers quickly while developing a feel for fundamental concepts in matrix algebra calculus and nonlinear programming Confusing abstractions are avoided and reviews of the broad range of essential topics of matrix algebra by concrete examples and illustrations are also provided

**Soft Computing in Industrial Applications** Yukinori Suzuki,Seppo J. Ovaska,Takeshi Furuhashi,Rajkumar Roy,Yasuhiko Dote,2012-12-06 This book contains recent theoretical innovations and a comprehensive collection of industrial applications in the emerging field of Soft Computing Soft computing is a new form of artificial intelligence and it consists of four core methodologies Fuzzy Computing Neuro Computing Evolutionary Computation and Probabilistic Computing These individual techniques are clearly complementary or synergistic rather than competitive Therefore it is a common practice to combine two or three methodologies when solving complex problems Also the systematic fusion of soft computing and hard computing is a highly potential alternative to be considered Soft computing methodologies are suitable for various real world applications because the available information and system knowledge are often imprecise un certain or partially even incorrect To handle such demanding conditions and obtain the required robustness with pure hard computing would typically be either very difficult or expensive This book is a unique collection of technical articles providing a thorough overview of the state of the art theory and industrial applications The core articles on evolutionary computation fuzzy computing and neuro computing are of particular interest to researchers and practicing engineers

**RF and Microwave Passive and Active Technologies** Mike Golio,Janet Golio,2018-10-03 In the high frequency world the passive technologies required to realize RF and microwave functionality present distinctive challenges SAW filters dielectric resonators MEMS and waveguide do not have counterparts in the low frequency or digital environment Even when conventional lumped components can be used in high frequency applications their behavior does not resemble that observed at lower frequencies RF and Microwave Passive and Active Technologies provides detailed information about a wide range of component technologies used in modern RF and microwave systems Updated chapters include new material on such technologies as MEMS device packaging surface acoustic wave SAW filters bipolar junction and heterojunction transistors and high mobility electron transistors HMETs The book also features a completely rewritten

section on wide bandgap transistors     **The RF and Microwave Handbook** Mike Golio,2000-12-20 The recent shift in focus from defense and government work to commercial wireless efforts has caused the job of the typical microwave engineer to change dramatically The modern microwave and RF engineer is expected to know customer expectations market trends manufacturing technologies and factory models to a degree that is unprecedented in the     *Artificial Neural Networks for Modelling and Control of Non-Linear Systems* Johan A.K. Suykens,Joos P.L. Vandewalle,B.L. de Moor,2012-12-06 Artificial neural networks possess several properties that make them particularly attractive for applications to modelling and control of complex non linear systems Among these properties are their universal approximation ability their parallel network structure and the availability of on and off line learning methods for the interconnection weights However dynamic models that contain neural network architectures might be highly non linear and difficult to analyse as a result Artificial Neural Networks for Modelling and Control of Non Linear Systems investigates the subject from a system theoretical point of view However the mathematical theory that is required from the reader is limited to matrix calculus basic analysis differential equations and basic linear system theory No preliminary knowledge of neural networks is explicitly required The book presents both classical and novel network architectures and learning algorithms for modelling and control Topics include non linear system identification neural optimal control top down model based neural control design and stability analysis of neural control systems A major contribution of this book is to introduce NLq Theory as an extension towards modern control theory in order to analyze and synthesize non linear systems that contain linear together with static non linear operators that satisfy a sector condition neural state space control systems are an example Moreover it turns out that NLq Theory is unifying with respect to many problems arising in neural networks systems and control Examples show that complex non linear systems can be modelled and controlled within NLq theory including mastering chaos The didactic flavor of this book makes it suitable for use as a text for a course on Neural Networks In addition researchers and designers will find many important new techniques in particular NLqemTheory that have applications in control theory system theory circuit theory and Time Series Analysis     *Electric Field Analysis* Sivaji Chakravorti,2017-12-19 Electric Field Analysis is both a student friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high voltage insulation systems The text begins by introducing the physical and mathematical fundamentals of electric fields presenting problems from power and dielectric engineering to show how the theories are put into practice The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results as well as Discusses finite difference finite element charge simulation and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination around a post insulator in a condenser bushing and around a gas insulated substation GIS spacer Explores numerical field calculation for electric field optimization demonstrating contour correction and examining the application of artificial neural networks

Explains how high voltage field optimization studies are carried out to meet the desired engineering needs Electric Field Analysis is accompanied by an easy to use yet comprehensive software for electric field computation The software along with a wealth of supporting content is available for download with qualifying course adoption
