Optimization of Chemical Processes Thomas F. Edgar, David Mautner Himmelblau, 1988-01-01 *Optimization of Chemical Processes*
Thomas F. Edgar, David Mautner Himmelblau, 1989 Optimization of Chemical Processes José María Ponce-Ortega, Rogelio Ochoa-Barragán, César Ramírez-Márquez, 2024-05-02 This textbook introduces readers to a comprehensive framework for the application of deterministic optimization strategies in the field of chemical processes with a strong emphasis on sustainability. The book establishes a vital connection between fundamental deterministic optimization principles, optimization tools, and real world application instances, all within the context of environmentally responsible practices. The approach put forth in this book is exceptionally versatile, allowing for the use of many optimization software and deterministic techniques. Contained in the book are many fundamental optimization concepts encompassing linear programming, nonlinear programming, integer programming, and multi objective optimization, all tailored to promote sustainable decision making. Furthermore, the book provides practical examples illustrating the application of these techniques within sustainable chemical processes, as well as tutorials. The textbook also explores the utilization of popular optimization software platforms such as GAMS, MATLAB, and Python, demonstrating how these tools can be leveraged for eco friendly process optimization. Through this comprehensive framework, readers can not only acquire the skills needed to optimize a wide range of processes, but also learn how to do so with sustainability at the forefront of their considerations. This approach streamlines the optimization process, eliminating unnecessary complications along the way, and ensuring that environmental and ethical considerations are integral to the decision making process.

Optimization of Chemical Processes T. F. Edgar, 1988-12 **Multi-Objective Optimization in Chemical Engineering** Gade Pandu Rangaiah, Adrian Bonilla-Petriciolet, 2013-03-20 For reasons both financial and environmental, there is a perpetual need to optimize the design and operating conditions of industrial process systems in order to improve their performance, energy efficiency, profitability, safety, and reliability. However, with most chemical engineering application problems having many variables with complex inter relationships, meeting these optimization objectives can be challenging. This is where Multi Objective Optimization (MOO) is useful to find the optimal trade offs among two or more conflicting objectives. This book provides an overview of the recent developments and applications of MOO for modeling, design, and operation of chemical, petrochemical, pharmaceutical, energy, and related processes. It then covers important theoretical and computational developments, as well as specific applications such as metabolic reaction networks, chromatographic systems, CO₂ emissions targeting for petroleum refining units, ecodesign of chemical processes, ethanol purification, and cumene process design. *Multi Objective Optimization in Chemical Engineering: Developments and Applications* is an invaluable resource for researchers and graduate students in chemical engineering, as well as industrial practitioners and engineers involved in process design, modeling, and optimization.

Thomas F. Edgar,1988 Mathematical Modeling Approaches for Optimization of Chemical Processes Gabriela Corsano,2009 Mathematical modelling is a powerful tool for solving optimisation problems in chemical engineering In this work several models are proposed aimed at helping to make decisions about different aspects of the processes lifecycle from the synthesis and design steps up to the operation and scheduling Using an example of the Sugar Cane industry several models are formulated and solved in order to assess the trade offs involved in optimisation decisions Thus the power and versatility of mathematical modelling in the area of chemical processes optimisation is analysed and evaluated
