Optimization of Discrete Time Systems Zbigniew Nahorski, Hans F. Ravn, René Victor Valqui Vidal, 1983 In the present book we present a new approach to deal with the control problems specifically the discrete time ones which indicates the possibility of exposing the fundamental theorems not only from control theory but also from adjoining areas of mathematical programming But further it provides a convenient base for formulating new and fundamental results in this book exemplified by the theorem of the Nonlinear Maximum Principle We call the approach the Upper Boundary Approach While thus the book

sketches some promising perspectives and documents a number of new results it does so we admit in a preliminary form
Rather than elaborating on presentation we gave priority to the quick communication of the results The reader will hopefully
agree with us in the strategy chosen **Sbornik** ,1995 **Introduction to Optimization and Multidisciplinary Design**
