Computer-Aided Modelling and Design IFIP TC 7.6 Working Group. Working Conference,1992 The working conference dealt with recent developments in the field of modelling and optimization and with knowledge based decision support systems This contributed to the realization of the aims of the working group 7 6 which are to promote theoretical research in the field of optimization including mathematical programming and optimal control to encourage the development of sophisticated knowledge based systems in which refined optimization models and algorithms are used to contribute to the exchange and dissemination of information and collective experience among the interested groups and individuals to support the practical application of such systems in control engineering industry economy etc A selection of papers is included into this proceedings volume since they reflect the current state of research in areas of interest to the field of KB DDS and or they are the value for the dissemination and exchange of information related to research topics of interest and or they describe relevant practical experience related to designing building implementing and using KB DSS *Optimization-based Computer-aided Modelling and Design* ,1992

New Trends in Mathematical Programming F. Giannessi,Sándor Komlósi,Tamás Rapcsák,2013-11-11 Though the volume covers 22 papers by 36 authors from 12 countries the history in the background is bound to Hungary where in 1973 Andras Pn kopa started to lay the foundation of a scientific forum which can be a regular meeting spot for experts of the world in the field Since then there has been a constant interest in that forum Headed at present by Tamas Rapcsak the Laboratory of Operations Research and Decisions Systems of the Computer and Automation Institute Hungarian Academy of Sciences followed the tradition in every respect namely conferences were organized almost in every second year and in the same stimulating area in the Matra mountains The basic fields were kept providing opportunities for the leading personalities to give voice to their latest results The floor has been widened recently for the young generation ensuring this way both a real location for the past present and future experts to meet and also the possibility for them to make the multicoloured rainbow of the fields unbroken and continuous The volume is devoted to the memory of Steven Vajda one of the pioneers on mathematical programming born in Hungary In 1992 he took part in the XIth International Conference on Mathematical Programming at Matrafire where with his bright personality he greatly contributed to the good spirituality of the event We thank Jakob Krarup for his reminiscence on the life and scientific activities of late Steven Vajda *Kybernetika* ,1994 *Scientific and Technical Aerospace Reports* ,1989 *Process Systems and Materials for CO₂ Capture* Athanasios I. Papadopoulos,Panos Seferlis,2017-05-01 This comprehensive volume brings together an extensive collection of systematic computer aided tools and methods developed in recent years for CO₂ capture applications and presents a structured and organized account of works from internationally acknowledged scientists

and engineers through Modeling of materials and processes based on chemical and physical principles Design of materials and processes based on systematic optimization methods Utilization of advanced control and integration methods in process and plant wide operations The tools and methods described are illustrated through case studies on materials such as solvents adsorbents and membranes and on processes such as absorption desorption pressure and vacuum swing adsorption membranes oxycombustion solid looping etc Process Systems and Materials for CO2 Capture Modelling Design Control and Integration should become the essential introductory resource for researchers and industrial practitioners in the field of CO2 capture technology who wish to explore developments in computer aided tools and methods In addition it aims to introduce CO2 capture technologies to process systems engineers working in the development of general computational tools and methods by highlighting opportunities for new developments to address the needs and challenges in CO2 capture technologies
