 Christian Hülsebusch, 2007      Sustainability of Organic Farming in Nepal Mrinila Singh, Keshav Lall Maharjan, 2017-11-07

This book explores the sustainability aspect of organic and conventional farming systems which is commonly categorized into three sub aspects social environmental and economic The social structure of a given area organic friendly technologies soil properties crop diversification and income are the elements chosen for comparison and are analyzed using descriptive and statistical methods In addition the book assesses the current status of the local organic market in Nepal and field experiments involving the use of various organic means to achieve better production for selected vegetables Determining the benefits and or challenges of organic and conventional farming is important to determining the most viable type of farming in the long term but can be greatly impacted by a given area s specific characteristics social environmental political etc which is why this study focuses on a specific location the Chitwan district of Nepal where group conversion to organic farming has existed alongside conventional farming for years This book offers a useful guide for both practitioners and academic researchers who are interested in organic farming and food security particularly in developing countries

The Integrated Use of Organic and Inorganic Fertilizers on Production and Soil Fertility in Ethiopia Mintesinot D., 2020-04-17 Seminar paper from the year 2019 in the subject Geography Earth Science Geology Mineralogy Soil Science grade A course Graduate Seminar language English abstract Soil fertility decline is a big issue in the Agriculture of Ethiopia The depletion of soil fertility is the main problem to sustain agricultural production and productivity in many countries Soils in Ethiopian have low levels of plant nutrients due to their removal by erosion and leaching by high rainfall One of the major constraints for crop production in Ethiopia is improper nutrient management Organic fertilizer improves physical and biological activities of soil but they have comparatively low in nutrient content so larger quantity is required for plant growth However inorganic fertilizer is usually immediately and fast containing all necessary nutrients that are directly accessible for plants but the continuous use of inorganic fertilizers alone causes soil organic matter degradation soil acidity and environmental pollution So the integrated nutrient management system is an alternative system for the sustainable and cost effective management of soil fertility by combined apply of inorganic with organic materials resulting in rising soil fertility and productivity without affecting the environment In this review the improvement of soil fertility and crops production Girma Chala and Gebreyes Gurmu 2018 Conducted an experiment on Organic and Inorganic Fertilizer Application and its Effect on Yield of Wheat and Soil Chemical Properties of Nitisols the research finding output at Holetta Agricultural Research Center in 2014 to 2015 these results of soil analysis after harvesting revealed that application of organic fertilizer improved soil pH OC total N and available P the highest wheat grain and biomass yield 6698 kg ha and 19417 kg ha respectively were obtained from the application of 50% VC and 50% N and P followed by full dose of recommended rate N and P from inorganic fertilizer

resulting in 6241 kg ha grain and 18917 kg ha biomass yields respectively The objective of this review has assessed the effects of integrated organic and inorganic fertilizers on soil fertility and productivity The study revealed that the appropriate application of organic with inorganic fertilizers increases productivity without negative effect on yield quality and improves soil fertility than the values obtained by organic or inorganic fertilizers separately

Lal, 2021-12-08 Soil organic matter SOM is the primary determinant of soil functionality Soil organic carbon SOC accounts for 50% of the SOM content accompanied by nitrogen phosphorus and a range of macro and micro elements As a dynamic component SOM is a source of numerous ecosystem services critical to human well being and nature conservancy Important among these goods and services generated by SOM include moderation of climate as a source or sink of atmospheric CO<sub>2</sub>

and other greenhouse gases storage and purification of water a source of energy and habitat for biota macro meso and micro organisms a medium for plant growth cycling of elements N P S etc and generation of net primary productivity NPP The quality and quantity of NPP has direct impacts on the food and nutritional security of the growing and increasingly affluent human population Soils of agroecosystems are depleted of their SOC reserves in comparison with those of natural ecosystems The magnitude of depletion depends on land use and the type and severity of degradation Soils prone to accelerated erosion can be strongly depleted of their SOC reserves especially those in the surface layer Therefore conservation through restorative land use and adoption of recommended management practices to create a positive soil ecosystem carbon budget can increase carbon stock and soil health This volume of *Advances in Soil Sciences* aims to accomplish the following Present impacts of land use and soil management on SOC dynamics Discuss effects of SOC levels on agronomic productivity and use efficiency of inputs Detail potential of soil management on the rate and cumulative amount of carbon sequestration in relation to land use and soil crop management Deliberate the cause effect relationship between SOC content and provisioning of some ecosystem services Relate soil organic carbon stock to soil properties and processes Establish the relationship between soil organic carbon stock with land and climate Identify controls of making soil organic carbon stock as a source or sink of CO<sub>2</sub> Connect soil organic carbon and carbon sequestration for climate mitigation and adaptation
