Optimization In Elliptic Problems With Applications To Mechanics Of Deformable:
    Optimization in Elliptic Problems with Applications to Mechanics of Deformable Bodies and Fluid Mechanics William G. Litvinov,2012-12-06 This book is intended to be both a thorough introduction to contemporary research in optimization theory for elliptic systems with its numerous applications and a textbook at the undergraduate and graduate level for courses in pure or applied mathematics or in continuum mechanics Various processes of modern technology and production are described by el liptic partial differential equations Optimization of these processes reduces to op timization problems for elliptic systems The numerical solution of such problems is associated with the solution of the following questions 1 The setting of the optimization problem ensuring the existence of a solution on a set of admissible controls which is a subset of some infinite dimensional vector space 2 Reduction of the infinite dimensional optimization problem to a sequence of finite dimensional problems such that the solutions of the finite dimensional problems converge in a sense to the solution of the infinite dimensional problem 3 Numerical solution of the finite dimensional problems   Optimization in Elliptic Problems with Applications to Mechanics of Deformable Bodies and Fluid Mechanics William G Litvinov,2000-04-01
    Orthogonal Systems and Convolution Operators Robert Ellis,Israel Gohberg,2003 The main concern of this book is the distribution of zeros of polynomials that are orthogonal on the unit circle with respect to an indefinite weighted scalar or inner product The first theorem of this type proved by M G Krein was a far reaching generalization of G Szeg s result for the positive definite case A continuous analogue of that theorem was proved by Krein and H Langer These results as well as many generalizations and extensions are thoroughly treated in this book A unifying theme is the general problem of orthogonalization with invertible squares in modules over C algebras Particular modules that are considered in detail include modules of matrices matrix polynomials matrix valued functions linear operators and others One of the central features of this book is the interplay between orthogonal polynomials and their generalizations on the one hand and operator theory especially the theory of Toeplitz marices and operators and Fredholm and Wiener Hopf operators on the other hand The book is of interest to both engineers and specialists in analysis   **One-dimensional Functional Equations** Genrich Belitskii,Vadim Tkachenko,2012-12-06 The monograph is devoted to the study of functional equations with the transformed argument on the real line and on the unit circle Such equations systematically arise in dynamical systems differential equations probabilities singularities of smooth mappings and other areas The purpose of the book is to present modern methods and new results in the subject with an emphasis on a connection between local and global solvability The general concepts developed in the book are applicable to multidimensional functional equations Some of the methods are presented for the first time in the monograph literature The book is addressed to graduates and researchers interested in dynamical systems differential equations operator theory or the theory of functions and their applications   New Difference Schemes for Partial Differential Equations Allaberen Ashyralyev,Pavel E. Sobolevskii,2004-06-25 This book explores new difference

schemes for approximating the solutions of regular and singular perturbation boundary value problems for PDEs The construction is based on the exact difference scheme and Taylor s decomposition on the two or three points which permits investigation of differential equations with variable coefficients and regular and singular perturbation boundary value problems   Mathematical Reviews ,2005   Analele științifice ale Universității "Al.
