High-Gain Observers in Nonlinear Feedback Control Hassan H. Khalil, 2017-06-23 For over a quarter of a century high gain observers have been used extensively in the design of output feedback control of nonlinear systems This book presents a clear unified treatment of the theory of high gain observers and their use in feedback control Also provided is a discussion of the separation principle for nonlinear systems this differs from other separation results in the literature in that recovery of stability as well as performance of state feedback controllers is given The author provides a detailed discussion of applications of high gain observers to adaptive control and regulation problems and recent results on the extended high gain observers In addition the author addresses two challenges that face the implementation of high gain observers high dimension and measurement noise Low power observers are presented for high dimensional systems The effect of measurement noise is characterized and techniques to reduce that effect are presented The book ends with discussion of digital implementation of the observers Readers will find comprehensive coverage of the main results on high gain observers rigorous self contained proofs of all results and numerous examples that illustrate and provide motivation for the results The

Isidori, Tarn, 2013-03-09 It is a great honor and privilege to have this opportunity of celebrating the 65th birthday of Professor Antonio Ruberti by holding an International Conference on Systems Models and Feedback The conference and this volume which contains its proceedings is a tribute to Professor Ruberti in acknowledgement of his major contributions to System Theory at a time in which this area was emerging and consolidating as an independent discipline his role as a leader of the Italian academic community his activity in promoting and fostering close scientific relations between Italian and U S scholars in Systems and Control The format of this conference is inspired by a series of seminars initiated exactly twenty years ago under the direction of Professor Ruberti in Italy and Professor R R Mohler in the U S By bringing together many authoritative talents from both countries these seminars were instrumental in promoting the expansion of System Theory in new areas notably that of Nonlinear Control and were the key to successful scientific careers for many of the younger attendants A Functional Description of the Edvac [an Automatically-Sequence Serial Binary Electronic Digital Computer] Moore School of Electrical Engineering, 1949 **Study of Quasi-optimum Feedback Control Techniques** Bernard Friedland, Frederick E.
