ABSTRACT

The study discusses the effects of using software on MSMEs' performance. The main objectives of the study are: to establish the effect of quick books accounting systems on financial performance, to assess the effects of software accounting systems on decision-making, to establish the effect of software accounting systems on financial reporting, and to establish the effects of tally accounting systems on MSMEs'. A descriptive survey research design was used in this study to allow researchers to gather information, summarize, present, and interpret for clarification. The study populations were all the 1000 MSMEs' in ottapalam municipality. To find out the required strata in the geographical locations a stratified random sampling technique was used for the study. The Primary data was collected through questionnaires and selected a sample of 100 respondents by using the drop-and-pick-later method personally by the researcher. Grounded on the findings the study recommends that the operation should have a strategic master plan from which the account systems are phased in line with the organizational fiscal capability and enforced in line with the strategic plan for the successful performance of the MSMEs. Further, the operation to increase further staff to ground the insufficiency of the accounting staff. The study established that the planning of account processes was in MSMEs. Still, this process was substantially done by the operation and advisers with the discussion of some elderly staff which left out other staff and stakeholders. The study recommends that the operation of the SMEs make this process inclusive by wide slices both perpendicular and vertical of their staff and all crucial stakeholders. Further, the study established that even though the MSMEs implemented computerized accounting systems; the inter-departments never had their strategic plans except for some departments only. The study recommends that all the MSMEs should develop and implement their accounting systems in line with the organization's strategic plans which will enhance the achievement of the organizational goals. The study also revealed that repliers describe the perpetration process as poor because the systems are in no way reviewed. The study recommends that the MSMEs should review their level and departments' level to ensure the success of the implementation process.

Canham,1999 This volume contains the papers presented at Symposium B of the 1998 spring meeting of the European Materials Research Society E MRS The symposium attracted well over 100 scientists engaged in one common goal that of developing efficient light emitting Si based

structures This included various technical approaches such as porous silicon Si nanocrystals rare earth doping of Si light emitting silicides Si based multilayer and alloy structures and SiGe structures In this respect the meeting had a more multidisciplinary approach than previous meetings the main idea being a fruitful comparison of the different techniques that would also stimulate cross disciplinary research Generally presentations at the conference revealed high scientific quality and several new findings and refinements of existing techniques were disclosed One example was the much debated report of optical gain from a structure containing Si nanocrystals Another example was the dramatically improved stability of derivatised porous silicon The technique of producing porous Si microcavities has been refined such that cavities of high optical quality may now be fabricated The latest material to emerge as a candidate for a Si based light emitting device has been iron silicide and room temperature operation has been reported The interest is further motivated by the prospect of obtaining direct bandgap emission The 90 collected papers represent about 80% of the submitted papers out of more than 140 accepted abstracts The papers have been grouped according to subject although no ordering within each subgroup has been attempted All invited papers have been placed in the foremost section to serve as reviews in each separate field
