This pocket reference provides quick reference information that will help you use Oracle Corporation s extensive set of built

in functions and packages including those new to Oracle8 Oracle's PL/SQL language is a programming language providing procedural extensions to the SQL relational database language and to an ever growing number of Oracle development tools. Among the most useful constructs in the PL/SQL language are the built-in functions and packages. Built-in functions are constructs that operate on certain types of data, e.g. numeric, character, to return a result. By using functions you can minimize the coding you need to do in your programs. Functions are described in detail in Steven Feuerstein's Oracle PL/SQL Programming, this comprehensive guide to building applications with PL/SQL has become the bible for PL/SQL developers who have raved about its completeness, readability and practicality. Built-in functions fall into several major categories:

- Character functions** Operate on character data. Examples include `CONCAT` concatenates two strings into one, `LENGTH` returns the length of a string and `REPLACE` replaces a character sequence in a string with a different set of characters.
- Date functions** Operate on dates and supplement the `DATE` datatype. Examples include `SYSDATE` returns the current date and time in the Oracle Server and `LAST_DAY` returns the last day in the month of the specified date.
- Numeric functions** Operate on numeric data. Examples include `CEIL` returns the smallest integer greater than or equal to the specified number and `POWER` returns a number raised to a particular power.
- LOB functions** Operate on large object data. Examples include `EMPTY_BLOB` returns an empty locator of the binary large object type and `EMPTY_CLOB` returns an empty locator of the character large object type.
- Conversion functions** Perform explicit conversions of different types of data. Examples include `TO_CHAR` converts a number or date to a string and `TO_NUMBER` converts a string to a number.
- Miscellaneous functions** Examples include `GREATEST` returns the greatest of the specified list of values and `UID` returns the user ID of the current Oracle session.

Built-in packages: collections of PL/SQL objects such as functions, procedures and data structures greatly expand the scope of the PL/SQL language. These packages are described in detail in Feuerstein's and Beresniewicz's book Oracle Built-in Packages. Built-in packages are built by Oracle Corporation and stored directly in the Oracle database. The functionality of the built-ins is available from any programming environment that can call PL/SQL stored procedures including Visual Basic, Oracle Developer 2000, Oracle Application Server for Web-based development and of course the Oracle database itself. Built-in packages extend the capabilities and power of PL/SQL in many significant ways. For example, `DBMS_SQL` executes dynamically constructed SQL statements and PL/SQL blocks of code, `DBMS_PIPE` communicates between different Oracle sessions through a pipe in the RDBMS shared memory, `DBMS_JOB` submits and manages regularly scheduled jobs for execution inside the database, `DBMS_LOB` accesses and manipulates Oracle8's large objects (LOBs) from within PL/SQL programs. The book shows how to call all of the commonly used built-in functions and packages. For packages it also shows the `RESTRICT REFERENCES` pragmas needed if you call packages from a SQL statement as well as the exceptions, constants and data structures defined in the packages.
