Living Donor Organ Transplantation Austen

Garwood-Gowers,2019-05-23 This book was originally published in 1999 When one or more essential organs failed the consequence used to be death However conventional medicine has developed artificial means of extending life the most successful of which is transplantation The most common form of organ to be transplanted is a kidney which will on average function for about a decade in its recipient Organ transplantation as a whole is widely practiced in most countries However few can procure enough organs to meet demand Many people who are suitable for a transplant die without getting one Many kidney patients can access and stay alive on dialysis until a suitable organ becomes available However even here sufficiency of organs would be beneficial because lesser reliance on dialysis would reduce healthcare costs and be better for patient quality of life This invaluable book shows that in the light of current practice and attitudes increasing living donor transplantation LDT levels is feasible It is one of the few works to systematically analyse the ethical and legal issues involved in LDT use in the light of empirical evidence including new data derived from a unique programme of interviews and questionnaires with transplant professionals living donors and recipients Readers are led to an understanding of when LDT is ethically and legally acceptable and to the strong case for using it much more extensively

The Transplant Patient Paula

T. Trzepacz,Andrea F. DiMartini,2000-03-16 Organ transplantation is an essential element of treatment for a wide range of diseases but despite increasing surgical success rates there remain many other issues affecting selection of patients and clinical outcome with which clinicians and patients themselves must be familiar Originally published in 2000 this book

reviews psychosocial psychiatric and ethical aspects of organ transplantation in a uniquely authoritative way Drawing heavily on the pioneering work of the Pittsburgh transplant team it surveys the essentials of transplantation biology before engaging with a range of topics fundamental to the success of the procedure and the quality of life of recipients and donors alike The interdisciplinary approach and the authority of the contributors will make this book of value to anyone with an interest in organ transplantation procedures

Ethical Problems Concerning Organ Transplantation in "21 Grams"

Stefan Hinterholzer, 2008-09 Seminar paper from the year 2008 in the subject American Studies Miscellaneous grade 2 University of Innsbruck Department of American Studies course Ethical Issues in American Medical and Legal Narratives 15 entries in the bibliography language English abstract How many lives do we live How many times do we die They say we all lose 21 grams at the exact moment of our death Everyone And how much fits into 21 grams How much is lost When do we lose 21 grams How much goes with them How much is gained How much is gained Twenty one grams The weight of a stack of five nickels The weight of a hummingbird A chocolate bar How much did 21 grams Paul Rivers leaves us with all these questions before he dies and in fact we need all these questions in order to reach a deeper understanding and to make sense of the movie So how much do 21 grams weigh And what are these 21 grams It is tempting to give a relatively simple answer from a medical or religious perspective We may say that gases exhaust from our body or even that the soul escapes from the body when we die But this movie goes a step further These 21 grams apparently weigh so little but in the end weigh a lot These 21 grams are the happiness of a family the target of revenge the reason for struggle they are life itself So our lives are dependent on these 21 grams which shows that life is really fragile And this leads us to the topic of this paper organ transplantation Organ transplantation gives us the possibility to save another person's life when our life is already over For many people it is self evident to donate an organ when someone else's life can be saved through that and it may seem that there are no real problems or questions concerning organ transplantation but there are Organ transplantation is a much more controversial issue as most people might believe and there are definitely a number of ethical problems concerning organ transplantation

The aim of the **Transplantation Ethics** Robert M. Veatch, 2000 Three decades after the first heart transplant surgery stunned the world organs including eyes lungs livers kidneys and hearts are transplanted every day But despite its increasingly routine nature or perhaps because of it transplantation offers enormous ethical challenges A medical ethicist who has been involved in the organ transplant debate for many years Robert M Veatch explores a variety of questions that continue to vex the transplantation community offering his own solutions in many cases Ranging from the most fundamental questions to recently emerging issues Transplantation Ethics is the first complete and systematic account of the ethical and policy controversies surrounding organ transplants Veatch structures his discussion around three major topics the definition of death the procurement of organs and the allocation of organs He lobbies for an allocation system administered by nonphysicians that considers both efficiency and equity that takes into consideration the patient's age and previous

transplant history and that operates on a national rather than a regional level Rich with case studies and written in an accessible style this comprehensive reference is intended for a broad cross section of people interested in the ethics of transplantation from either the medical or public policy perspective patients and their relatives transplantation professionals other health care professionals and administrators social workers members of organ procurement organizations and government officials involved in the regulation of transplants Using the Bodies of the Dead Nora Machado,2019-05-23

First published in 1998 this unique timely book applies sociological concepts and analysis to the study of organ transplantation and related medical phenomena It provides comparisons between differing transplantation systems and examines the ethical issues of organ transplantation organ donation and recipient selection The author presents rich empirical materials and fertile theory with which to better understand a number of the current problems and developments related to organ transplantation and other high tech medical developments It also addresses important ethical issues Dr Nora Machado develops and applies an impressive range of new concepts and models in analyzing organ transplantation systems the dissonance that appears to be endemic to these systems the particular functions of a number of hospital roles rituals and discourses in dealing with such dissonance and related conflict the legal and normative regulation of body part extraction and allocation in large scale systems the cognitive and moral dilemmas which physicians nurses and next of kin face in the use of the bodies of the dead Much of Dr Machado's theoretical work is of a highly general value and should be of considerable interest even to those not engaged in issues of organ transplantation or bio medical developments

Organ Transplants; the Moral Issues Cathie Lyons,1970 **Non-Heart-Beating Organ Transplantation** Institute of

Medicine,Roger Herdman,John T. Potts,1998-01-18 Non heart beating donors individuals whose deaths are determined by cessation of heart and respiratory function rather than loss of whole brain function could potentially be of major importance in reducing the gap between the demand for and available supply of organs for transplantation Prompted by questions concerning the medical management of such donors specifically whether interventions undertaken to enhance the supply and quality of potentially transplantable organs i e the use of anticoagulants and vasodilators were in the best interests of the donor patient the U S Department of Health and Human Services asked the Institute of Medicine to examine from scientific and ethical points of view alternative medical approaches that can be used to maximize the availability of organs from a donor in an end of life situation without violating prevailing ethical norms This book examines transplantation supply and demand historical and modern conceptions of non heart beating donors and organ procurement organizations and transplant program policies and contains recommendations concerning the principles and ethical issues surrounding the topic

Medical and Ethical Issues in Procurement John T. Potts, 2013-09 This historic book may have numerous typos and missing text Purchasers can usually download a free scanned copy of the original book without typos from the publisher Not indexed Not illustrated 1997 01 edition Excerpt freedom within some areas while setting minimum standards in others In general the NHBD protocols received and reviewed by the IOM have been written or approved within the last 4 years The oldest was revised and approved in 1993 and the most recent was approved in July 1997 With respect to OPOs that have approved protocols in place it is important to bear in mind that organs are procured from very few NHBDs only one or two by most OPOs each year The fact that there are 25 OPOs with approved NHBD protocols and that UNOS reports 65 NHBDs in 1996 provides confirmation of the low rate of procurement of organs from NHBDs by most OPOs Currently OPOs located at hospitals tend to procure more organs from NHBDs Review of the NHBD protocols submitted to the IOM reveals a consensus among OPOs in two areas 1 discussion of organ donation with families and informed consent should take place only after an independent decision to withdraw life support has been made and 2 the physician who declares death after withdrawal of support shall not be affiliated in any way with the OPO procurement team or transplant team Outside of these two areas OPO protocols for NHBDs differ greatly Some variations are merely procedural whereas others imply ethical differences The

criteria for determining death medical interventions including the use of heparin and phentolamine which are directed toward preparation for transplantation rather than donor patient care intervention by the OPO to assess and prepare the donor before consent for donation and declaration of death and the timing approach and detail of obtaining family consent all are problematic issues discussed next in this report A consensus on these issues expressed in more **Raising the Dead**
