Organ And Species Specificity In Chemical Carcinogenesis:

Organ and Species Specificity in Chemical Carcinogenesis Robert Langenbach, 2013-11-21 The Symposium on Organ and Species Specificity in Chemical Carcinogenesis was held March 1981 in Raleigh North Carolina Dr James Miller concluded this Symposium with these remarks Without a doubt all of us would agree this has been a very successful symposium in illustrating a very wide range of chemical stereochemical biochemical metabolic molecular and biological factors in chemical carcinogenesis I think it is noteworthy that many of the discussions have dealt with pharmacodynamic or toxicodynamic factors that can influence the biological activities of the extremely wide range of structures that we choose to call chemical carcinogens I sincerely hope that after this symposium everyone here will realize the very great need we have for further information on these agents in the species we profess to be working for the human species We badly need an adequate data base on human organs human tissues human cells human subcellular preparations and human body fluids I don't think we can rely on extrapolations of data on chemical carcinogenesis from experimental animals to humans no matter how sophisticated or plausible these extrapolations may seem until we know far more about chemical carcinogenesis in humans Now I'd like to add a somewhat personal note As many of you know my wife and I have shared a joint career of some 40 years in this field and I'd like to emphasize in these closing remarks the factor of youth Environmental Health

Perspectives, 1993 **Cumulated Index Medicus**, 1983 **Mechanisms of Chemical Carcinogenesis** Curtis C. Harris, Peter A. Cerutti, 1982 **Etiology: Chemical and Physical Carcinogenesis** Frederick F. Becker, 1982-01-31 Band 1

Carcinogenesis -- a Comprehensive Survey, 1985 Genotoxicology of N-Nitroso Compounds T. Rao, 2013-11-11 **Topics in Chemical Mutagenesis** is a new series dedicated to studies in the areas of environmental chemical mutagenesis and genetic toxicology In this series we will explore some of many topics that are emerging in these rapidly developing fields The purpose of the present volume is to attempt to organize and compare the genotoxic properties of the N nitroso compounds This is a particularly interesting class of compounds because of the problems encountered with the Salmonella assay of Ames in generating both false positive and false negative results The battery approach using a number of assay systems seems more appropriate to evaluate chemicals in this class Topics to be discussed in other volumes in this series include single cell mutation monitoring systems the detection of genetic damage in mammalian germ cells the mutagenicity of pesticides problems in monitoring human populations in genetic toxicology and a glossary of terms in genetic toxicology All of these books are in various stages of development and should appear within the next few years Frederick J de Serres Series Editor vii Preface During the past ten years there has been an explosive development in the number of short term tests to predict the biological risks especially risks of cancer in exposure to xenobiotic chemicals The number of published articles in this area has reached many thousands a year and there are several new journals devoted almost entirely to the presentation of the results obtained in these tests **Mechanisms of Carcinogenesis in Risk Identification** Harri Vainio, 1992 This

comprehensive authoritative volume includes a consensus document drawn up by a working group of international experts in various fields of carcinogenesis It describes the multistage and multifactorial nature of carcinogenesis the different mechanisms of action of carcinogens epidemiological and laboratory means for their identification and proposed principles and procedures for their possible use in the prediction and evaluation of carcinogenic risks to humans Other chapters cover critical molecular targets in chemical carcinogenesis mechanisms of carcinogenicity animal carcinogenicity tests and their interpretations biological markers in exposed humans and data analysis and modelling This work will be a valuable reference for cancer researchers and toxicologists

Comprehensive Toxicology: Chemical carcinogens and anticarcinogens I. Glenn Sipes,1997 This volume in the Comprehensive Toxicology series demonstrates how the use of extremely powerful molecular and cell biology techniques has stimulated the growth of toxicology as a scientific discipline The field of toxicology has evolved from its earlier days of in vivo and descriptive studies to focusing on mechanisms Frequently mechanisms require an examination at the cellular and molecular level Molecular toxicology has opened the door to comprehending the basic mechanisms of how toxicants show their effects The volume is a comprehensive integrated profile of the molecular effects of toxicants and the molecular mechanisms involved in producing cellular and tissue injury

Cell Proliferation and Chemical Carcinogenesis ,1993 **P-450 and Chemical Carcinogenesis** Yusaku Tagashira,Yūsaku

Tagashira,Tsuneo Ōmura,1985-06 This book is one of a GANN Monograph on Cancer Research series and is based on a Japanese Cancer Association sponsored symposium entitled Multiplicity of Chemical Carcinogen Activating Enzymes with Particular Emphasis on Cytochrome P 450 which was held in Tokyo on November 21 1983 The principal role of microsomal cytochrome P 450 in the metabolic activation of various chemical carcinogens in animal cells has been well established The activated chemical carcinogens induce mutations of the cells which is an essential part of the initiation of chemical carcinogenesis Since microsomal cytochrome P 450 in various animal tissues includes multiple molecular species with different substrate specificities and different responses to chemical inducers knowledge of the molecular and catalytic properties and the inducibilities of those cytochrome P 450 forms is surely a most important base from which to elucidate the mechanism of chemical carcinogenesis The focus of the symposium was this area of molecular diversity and inducibility of microsomal cytochrome P 450 in animal tissues The mechanism of activation of various types of chemical carcinogens by cytochrome P 450 and related enzymes was another main topic The editors who were also the symposium organizers hope these summaries of current research in this field in Japan will stimulate future development of studies on the mechanism of chemical carcinogenesis

The Cumulative Book Index ,1983 A world list of books in the English language **DNA Damage and Repair in Human Tissues** Betsy M. Sutherland,Avril D. Woodhead,1990-11-30 Physical and chemical agents in the environment damage the DNA of humans and pose a major threat to human health today and to the genetic integrity of human populations Although studies on isolated DNA in vitro on prokaryotes on mammalian cells in culture and on laboratory

animals have provided essential background information it is now possible to study DNA damage and repair in human tissues directly New techniques of high sensitivity especially those not requiring radioactive labeling have made possible quantitation of DNA damage and repair as well as detection of residual unrepaired DNA lesions In recent years several investigators have taken up the challenge of studying damage and repair responses in humans and we have chosen that work as the special focus of this Symposium Major advances in understanding damage and responses in human skin in blood cells and in human internal organs indicate three major themes First DNA damage levels in human tissues depend not only on the initial exposures but also on the capacity of that tissue for repair of the specific lesion type Second repair in human tissues may differ quantitatively and qualitatively from that in human cells in culture
