Making Medical Decisions for the Profoundly Mentally Disabled Norman L.

Cantor,2009-08-21 A legal and moral analysis of medical decision making on behalf of those with such severe cognitive impairments that they cannot exercise self determination In this book Norman Cantor analyzes the legal and moral status of people with profound mental disabilities those with extreme cognitive impairments that prevent their exercise of medical self determination He proposes a legal and moral framework for surrogate medical decision making on their behalf The issues Cantor explores will be of interest to professionals in law medicine psychology philosophy and ethics as well as to parents guardians and health care providers who face perplexing issues in the context of surrogate medical decision making The profoundly mentally disabled are thought by some moral philosophers to lack the minimum cognitive ability for personhood Countering this position Cantor advances both theoretical and practical arguments for according them full legal and moral status He also argues that the concept of intrinsic human dignity should have an integral role in shaping the bounds of surrogate decision making Thus he claims while profoundly mentally disabled persons are not entitled to make their own medical decisions respect for intrinsic human dignity dictates their right to have a conscientious surrogate make medical

decisions on their behalf Cantor discusses the criteria that bind such surrogates He asserts contrary to popular wisdom that the best interests of the disabled person are not always the determinative standard the interests of family or others can sometimes be considered Surrogates may even be consistent with the intrinsic human dignity standard sometimes authorize tissue donation or participation in nontherapeutic medical research by profoundly disabled persons Intrinsic human dignity limits the occasions for such decisions and dictates close attention to the preferences and feelings of the profoundly disabled persons themselves Cantor also analyzes the underlying philosophical rationale that makes these decision making criteria consistent with law and morals *Making Health Care Decisions: Appendices, empirical studies of informed consent* United States. Making Medical Choices Jane Stein,Jane J. Stein,1978 The central theme of this book is that technological advances in medicine have created a multitude of choices for each individual choices that can influence how we live and die These choices are difficult ones and the book provides a better understanding of the issues Thus the implications of each choice become clearer Such decisions remain inherently very difficult and personal Thoughtful compassionate societies must consider these difficult problems Can we develop mechanisms to assist in the medical choices that will inevitably take place throughout each individual's life Jane Stein makes a stimulating effort to clarify these subjects in this book She calls to attention problems we would prefer to avoid touches the untouchable and in so doing contributes to a constructive debate on the future of human life Preface **Making Medical Decisions** Katie Komasinski,Patrick A. Herrmann,Northern Indiana Health Systems Agency,Indiana Committee for the Humanities,1982 **Making Medical Decisions** American Association of Retired Persons. Health Advocacy Services,1994 **Medical Decision Making** Stefan Felder,Thomas Mayrhofer,2022-04-04 This textbook offers a comprehensive analysis of medical decision making under uncertainty by combining test information theory with expected utility theory The authors show how the parameters of Bayes theorem can

be combined with a value function of health states in order to arrive at informed test and treatment decisions in the face of diagnostic and therapeutic risks Distinguishing between risk neutral risk averse and prudent decision makers they demonstrate the effects of risk preferences on medical decisions Furthermore they analyze individual and multiple tests as well as diagnostic models in which the decision maker chooses the test outcome The consequences of test and treatment decisions for the patient are encompassed by quality adjusted life years QALYs and the standard economic model which applies the willingness to pay for health approach Lastly non expected utility models of choice under risk and uncertainty are presented Although these models can explain some of the test and treatment decisions observed they are less suitable for normative analyses aimed at providing guidance on medical decision making This third edition provides extensively revised versions of all chapters and reflects recent innovations in medical decision making such as decision curve analysis New chapters focus on the health economics of and revealed preferences in medical decisions The book is intended for students of health economics and medicine as well as for medical decision makers and physicians dealing with uncertainty in their test and treatment decisions
