## Meeting Challenges With Geologic Maps:

**Meeting Challenges with Geologic Maps** William Andrew Thomas, Robert D. Hatcher, 2004      **Regional Geology and Tectonics: Principles of Geologic Analysis** David G. Roberts, A.W. Bally, 2012-03-26 The purpose of the series is to compile and pass on the accumulated knowledge of regional geology that is being lost as generalists with field experience are replaced by specialists with computers. It is designed to appeal to both academic and petroleum geologists. In this third and final part of Volume One geologists discuss extensional basins including rifts, passive margins, and inverted extensional basins. The chapters have a broadly similar layout and where appropriate include a section on the petroleum system. They cover non-volcanic and transform passive margins, cratonic basins on pre-Cambrian and Paleozoic basements, and world maps. Annotation 2012 Book News Inc, Portland, OR, booknews.com      *Rethinking the Fabric of Geology* Victor R. Baker, 2013-11-07 The 50 years since the publication of *Fabric of Geology* edited by C. C. Albritton Jr. have seen immense changes in both geology and philosophy of science. *Rethinking the Fabric of Geology* explores a number of philosophical issues in geology ranging from its nature as a historical science to implications for geological education. Provided by publisher      Regional Geology and Tectonics David G. Roberts, A.W. Bally, 2012-12-31 Volume 1A: Principles of Geologic Analysis. A how-to primer describes the basic concepts petroleum geologists and students need to understand hydrocarbon exploration in a broad range of geological settings globally. Volume 1B: Phanerozoic Rift Systems and Sedimentary Basins. Incorporates industry data to present regional seismic lines and cross sections to accurately document and analyze proven hydrocarbon systems. It also includes summaries of analogue and theoretical models as an essential backdrop to the structure and stratigraphy of a variety of geological settings. Volume 1C: Phanerozoic Passive Margins, Cratonic Basins, and Global Tectonic Maps. Focuses on both volcanic and non-volcanic passive margins as well as cratonic basins, critical habitats for hydrocarbons. It provides a unique basis for comparison of different passive margins and for an understanding of their structural and stratigraphic evolution as well as their petroleum systems, especially useful to explorationists working in deep water basins and researchers examining the tectonic evolution of the continent-ocean transition. A vast amount of data to enable hydrocarbon play assessments and analysis on passive margins is also included in this thorough yet accessible reference. Individual volumes can also be purchased. 9780444530424, 9780444563569, 9780444563576. Volume 1A discusses in detail the principles of regional geological analysis and the main geological and geophysical tools used in basin analysis. Volume 1B features simple documentation and analysis of major rift systems developed in contrasting geological settings as well as in-depth analyses of active rifts in various regions all over the world for immediately implementable petroleum exploration applications. Volume 1C features real-world case studies and analyses, useful summaries of analogue and theoretical models, thorough documentation of numerous passive margins that are the focus of deep water oil exploration, and unique tectonic maps facilitating access to exact basin locations and their tectonic settings.
