Space and Time in the Microworld D.I. Blokhintsev, 2012-12-06 A way of understanding the laws which govern the world of elementary particles has not been found yet Present day theoretical physicists have to be satisfied with compromises which at the best promise some success at the expense of generality and unity Under these circumstances a critical analysis of the basic concepts of modern quantum theory may be timely and useful It is hoped that the value of such an analysis may be preserved even if in the near future new ways of understanding the basis of elementary particle physics are discovered In this monograph one specific aspect of this analysis is treated namely the problems of geometry in the microworld An outline of geometrical measurements in the macroworld was given previously These measurements seem to be clear enough for at least a certain set of problems to be considered as a starting point for discussing the situation in the microworld The concepts and methods which are useful in the macroworld may only indirectly be carried over into the microworld and they require a high degree of abstraction In comprehending the physical content of dynamic variables which have geometric meaning for example the space time particle coordinates $x y z t$ it is often necessary to have recourse to gedanken experiments which although not feasible in practice can nevertheless be compatible with the basic principles of geometry and quantum mechanics
