Chandra Kalia, 2016-02-16 This book highlights the efforts made by distinguished scientific researchers world wide to meet
two key challenges i the limited reserves of polluting fossil fuels and ii the ever increasing amounts of waste being generated
These case studies have brought to the foreground certain innovative biological solutions to real life problems we now face
on a global scale environmental pollution and its role in deteriorating human health The book also highlights major advances
in microbial metabolisms which can be used to produce bioenergy biopolymers bioactive molecules enzymes etc Around the
world countries like China Germany France Sweden and the US are now implementing major national programs for the
production of biofuels The book provides information on how to meet the chief technical challenges identifying an industrially
robust microbe and cheap raw material as feed Of the various possibilities for generating bioenergy the most attractive is the
microbial production of biohydrogen which has recently gained significant recognition worldwide due to its high efficiency
and eco friendly nature Further the book highlights factors that can make these bioprocesses more economical especially the
cost of the feed The anaerobic digestion AD process is more advantageous in comparison to aerobic processes for stabilizing
biowastes and producing biofuels hydrogen biodiesel 1 3 propanediol methane electricity biopolymers polyhydroxyalkanoates
cellulose exopolysaccharides and bioactive molecules such as enzymes volatile fatty acids sugars toxins etc for
biotechnological and medical applications Information is provided on how the advent of molecular biological techniques can
provide greater insights into novel microbial lineages Bioinformatic tools and metagenomic techniques have extended the
limits to which these biological processes can be exploited to improve human welfare A new dimension to these scientific
works has been added by the emergence of synthetic biology The Big Question is How can these Microbial Factories be
