Environment and Society in the Long Late Antiquity

,2019-01-04 Environment and Society in the Long Late Antiquity brings together scientific archaeological and historical evidence on the interplay of social change and environmental phenomena at the end of Antiquity and the dawn of the Middle Ages covering the period ca 300-800 AD. It gives a new impetus to the study of the environmental history of this crucial period of transition between two major epochs in premodern history. The volume contains both systematic overviews of the previous scholarship and available data as well as a number of interdisciplinary case studies. It covers a wide range of topics including the histories of landscape, climate, disease and earthquakes all intertwined with social, cultural, economic and political developments. Contributors are Daniel Abel, Schaad, Francesca Alba, Sánchez, Flavio Anselmetti, José Antonio López, Sáez, Daniel Ariztegui, Brunhilda Brushulli, Yolanda Carrión, Marco Alexandra Chavarría, Petra Dark, Carmen Fernández, Ochoa, Martín, Finn, Asuunta, Florenzano, Ralph, Fyfe, Didier, Galop, Benjamin, Graham, John, Haldon, Kyle, Harper, Richard, Hodges, Adam, Izdebski, Katarina, Kouli, Inga, Labuhn, Tamara, Lewit, Anna, Maria, Mercuri, Alessia, Masi, Lucas, McMahon, Lee, Mordechai, Mario, Morellón, Timothy, Newfield, Almudena, Orejas, Saco del Valle, Leonor, Peña, Chocarro, Sebastián, Pérez, Díaz, Eleonora, Regattieri, Stephen, Rippon, Neil, Roberts, Laura, Sadori, Abigail, Sargent, Gaia, Sinopoli, Paolo, Squatriti, Giovanni, Stranieri, Raymond, van Dam, Bernd, Wagner, Mark, Whittow, Penelope, Wilson, Jessie, Woodbridge. [Dealing with biases](#) Hendrik Feiken, 2014-09-18. This book explores the bias that is introduced by erosion and sedimentation on the distribution of archaeological materials in Mediterranean landscapes. It describes innovative and interdisciplinary work that led to the formulation of a broad range of geoarchaeological approaches that are applied to two Italian areas studied intensively by the Groningen Institute of Archaeology: the Pontine Region in South Lazio and the Raganello Basin in North Calabria. The approaches deal with geological biases affecting the study of protohistoric remains in the sedimentary part of the Pontine plain, the development of a detailed landscape classification approach to predict and test site location preferences and survey biases in the uplands of both study areas and the development and evaluation of an innovative computerised landscape evolution model for a test area in the Raganello Basin uplands. In addition to the presented case study, this book also shows how the three geoarchaeological approaches can be applied in a wider context to quantitatively understand how erosion and sedimentation bias our understanding of archaeological records

[Treatise on Geomorphology](#), 2013-02-27. The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of the discipline. Historical Change in the Physical Environment Janet M. Hooke, Roger J. P. Kain, 1982

Roman Crete: New Perspectives Jane E. Francis, Anna Kouremenos, 2016-05-31 The last several decades have seen a dramatic increase in interest in the Roman period on the island of Crete Ongoing and some long standing excavations and investigations of Roman sites and buildings intensive

archaeological survey of Roman areas and intensive research on artifacts history and inscriptions of the island now provide abundant data for assessing Crete alongside other Roman provinces. New research has also meant a reevaluation of old data in light of new discoveries and the history and archaeology of Crete is now being rewritten. The breadth of topics addressed by the papers in this volume is an indication of Crete's vast archaeological potential for contributing to current academic issues such as Romanization, acculturation, climate and landscape studies, regional production and distribution, iconographic trends, domestic housing, economy and trade, and the transition to the late Antique era. These papers confirm Crete's place as a fully realized participant in the Roman world over the course of many centuries but also position it as a newly discovered source of academic inquiry.

Environments and Historical Change Paul Slack, 1999. Present anxieties about global warming and threats to biodiversity leave no doubts that environmental changes impact upon humans. Perceptions of the environment change as people try to define and shape nature in different ways. The book explores the relationship between environmental change and society from the last Ice Age to the present. The book examines the environmental impact of fluctuations in climate and the demand for energy and the patterns which human societies have imposed on their surroundings, from boundaries to the cultural projections of legends and film. Together they show how insights from the disciplines of geography and history and anthropology can throw fresh light on the long term attachment of people to place. The chapters in this book were originally delivered as Linacre Lectures at Linacre College, Oxford University.

These results are combined with other archaeological epigraphic and literary evidence to show that there was an overall decline in most aspects of the standard of living between the fourth and the seventh centuries A.D.
