Brzezinski,2003 **Chemica Scripta** ,1989 Membrane Protein Structure Stephen H. White,1994 Studies of receptors
ion channels and other membrane proteins require a solid understanding of the structural principles of these important
biomolecules Membrane protein structure is however a very challenging field The structures of only three types of
transmembrane proteins have been determined to moderate or high resolution during the last two decades a period during
which the amino acid sequences of hundreds if not thousands of membrane proteins have been reported As a result the
creation of structural models to serve as guides for studies of receptors channels and other membrane proteins has become
crucially important This book has been assembled in order to share the experiences and findings of expert researchers in
protein structure and structure prediction methods as well as membrane biophysics and lipid physical chemistry whose work
establishes the basis for the development of suitable model structures The reviews presented here emphasize fundamental
ideas and provide an entry to the diverse and complex literature The four major sections deal with the general nature of the
membrane protein structure problem biochemical and molecular biological approaches to protein topology direct structural
methods and model and physicochemical approaches The work will be of interest to physiologists cellular and molecular
biologists biophysicists and biochemists working on the function of membrane proteins such as receptors ion channels and
transporters as well as senior graduate students and independent investigators *Research Awards Index* ,1988

Vance, Dennis E. Vance, 2002 The first edition of this book was published in 1985 The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs The book is not a collection of exhaustive reviews but a current and readable summary of diverse aspects of lipids It is intended as an advanced and up to date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids lipoproteins and membranes
