## **Mountain Environments:**

*Mountain Environments* John Gerrard, 1990 Using examples chosen from a variety of geographical settings and scales A J Gerrard presents a novel approach to the study of mountain environments He provides a framework in which mountains as special environments can be studied and shows how no matter what their location or origin all mountain regions share common characteristics and undergo similar shaping processes Gerrard's integrated approach combines ecological, climatological, hydrological, volcanic, and environmental management concerns in a systematic treatment of mountain geomorphology He begins by examining the special nature of mountains including a new classification of mountain types He discusses mountain ecosystems stressing the interaction between biota, soil, climate, relief, and geology examines the high energy systems of weathering and mass movement and analyzes the role of rivers and hydrology and the processes of slope evolution Two chapters are devoted to the particular characteristics of glaciation and vulcanism in mountain formation The book concludes with a discussion of the special problems that human use of mountain regions create including engineering, natural hazards, soil erosion, and the concept of integrated development A J Gerrard is Lecturer in Geography at the University of Birmingham England

John Gerrard (Geograph, Grossbritannien) John Gerrard,1993-04 Continuity and Change in Cultural Adaptation to Mountain Environments Ludomir R Lozny,2013-03-12 Up until now mountain ecosystems have not been closely studied by social scientists as they do not offer a readily defined set of problems for human exploitation as do for instance tropical forests or

arctic habitats But the archaeological evidence had shown that humans have been living in this type of habitat for thousands of year From this evidence we can also see that mountainous regions are often frontier zones of competing polities and form refuge areas for dissident communities as they often are inherently difficult to control by centralized authorities As a consequence they fuel or contribute disproportionately to political violence But we are now witnessing changes and increasing vulnerability of mountain ecosystems caused by human activities Human adaptability to mountain ecosystems This volume presents an international and interdisciplinary account of the exploitation of and human adaptation to mountainous regions over time The contributions discuss human cultural responses to key physical and cultural stressors associated with mountain ecosystems such as aridity quality of soils steep slopes low productivity as well as transient phenomena such as changing weather patterns deforestation and erosion and the possible effects of climate change This volume will be of interest to anthropologists ecologists and geologists as mountainous landscapes change fast and cultures disappear and they need to be recorded and mountain regions are of interest for studies on environmental change and cultural responses of mountain populations provide clues for us all Critical to understanding mountain adaptations is our comprehension of human decision making and how people view short and long term outcomes
