*Multisensory Integration in Action Control* Jochen Musseler,Knut Drewing,2014-11-03 The integration of multisensory information is an essential mechanism in perception and in controlling actions Research in multisensory integration is concerned with how the information from the different sensory modalities such as the senses of vision hearing smell taste touch and proprioception are integrated to a coherent representation of objects Multisensory integration is central for action control For instance when you grasp for a rubber duck you can see its size and hear the sound it produces Moreover identical physical properties of an object can be provided by different senses You can both see and feel the size of the rubber duck Even when you grasp for the rubber duck with a tool e g with tongs the information from the hand from the effect points of

the tool and from the eyes are integrated in a manner to act successfully Over the recent decade a surge of interest in multisensory integration and action control has been witnessed especially in connection with the idea that multiple sensory sources are integrated in an optimized way For this perspective to mature it will be helpful to delve deeper into the information processing mechanisms and their neural correlates asking about the range and constraints of this mechanisms about its localization and involved networks    **Neurological Rehabilitation** Michael P. Barnes,David C. Good,2013-01-10

Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series It is the first time that this increasing important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community The volume is divided into five key sections The first is a summary of current research on neural repair recovery and plasticity The authors have kept the topics readable for a non scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice The next section covers the basic principles of neurorehabilitation including excellent chapters on learning and skill acquisition outcome measurement and functional neuroimaging The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems such as spasticity pain sexual functioning and dysphagia Cognitive emotional and behavioural problems are just as important and are covered in the next section with excellent chapters for example on memory and management of executive dysfunction The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field A volume in the Handbook of Clinical Neurology series which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences their impact on the understanding of neurological disorders and on patient care    **Learning and Production of Movement Sequences**
