## A. RESPIRATORY TRACT SECRETIONS

1. Samples: Sputum, induced sputum, bronchial washing, bronchial lavage, tracheal aspirations.
2. Specimens may be stored at room temperature if the processing is completed within **2 hours**.
3. If processing is delayed, specimens should be refrigerated at **4 degrees Celsius**.

## B. CEREBROSPINAL FLUID

1. **Should be filtered through a: 0.45-mm membrane filter.**
2. If less than 1mL of a specimen is submitted for culture, it should be centrifuged, and 1-drop aliquots of the sediment should be placed in several areas on the agar surface.
3. **CSF specimens should never be refrigerated.**

## C. BLOOD

1. Use automated blood culture systems such as BACTEC.
2. The optimal temperature for fungal blood cultures is 30 degrees Celsius, and the suggested incubation time is 21 days.

## D. EYE (Corneal Scrapings or Vitreous Humor)

1. **Corneal scrapings** collected by a physician should be placed directly onto microscopic slides and inoculated onto non-inhibitory media.
2. **Vitreous humor aspiration** should be concentrated by centrifugation, similar to processing a CSF sample, and the sediment should be used for smears and culture.

## E. HAIR, SKIN, AND NAIL SCRAPINGS

1. **Samples collected from lesions** may be obtained by scraping the skin or nails with a scalpel blade or microscope slide.
2. **Infected hairs** are removed by plucking them with forceps.
3. These specimens should be placed in a sterile container; they should not be refrigerated.
4. If the infection with *Malassezia furfur* is suspected, olive oil or an olive oil-saturated paper

disk should be placed in the first quadrant of the agar plate.

## F. VAGINAL

1. Transported to the laboratory within 24 hours of collection using culture transport swabs.
2. Vaginal cultures should be screened for yeasts and incubated at 30 degrees Celsius for 7 days.

## URINE

1. **The 24-hour urine sample is unacceptable for culture.**
2. All urine samples should be centrifuged, and the sediment is cultured using a loop to provide adequate isolation of colonies.

## TISSUE, BONE MARROW, AND STERILE BODY FLUIDS

1. **All tissues** should be processed before culturing by mincing not grinding.
2. **Tissue pieces** should be pressed into the appropriate culture media.
3. **Bone marrow** may be collected in a heparinized syringe.
4. **Sterile body fluids** should be concentrated by centrifugation before culturing, and at least 1mL of the specimen should be placed on the surface of appropriate culture media.

## Laboratory Diagnosis of Mycoses

Brain-heart infusion agar	Primary recovery of saprobic and pathogenic fungi.
Brain-heart infusion agar with antibiotics	Primary recovery of pathogenic fungi exclusive of dermatophytes.
Chromogenic agar	Isolation and presumptive indication of yeast and filamentous fungi.
Dermatophyte test medium	Primary recovery of dermatophytes; recommended as screening medium.

## **Mycological Studies:**

**Mycological Studies** Jay Millar, 2002 *Mycological Studies* is a cross fertilization of language and fungus exposing the similarities between the two species Just as mushrooms sprout suddenly and explosively so does language Jay Millar's second collection of poems looks at the world of mushrooms through a kaleidoscope of perspectives and styles ranging from innovative and constraint based writing to visual and concrete poetry This book makes a unique contribution to the poetry of science and nature if mushrooms have a language that is spoken to us or through us as hallucinogenic experiences Millar has managed to tap into that language and refine it into potent poetic form As readers says Millar we witness that which occurs on and above the surface of language Meanwhile the fungal threads themselves lying beneath or between the letters faithfully connect each piece of the whole to all of the others in a particular order forever unknown to the reader *Mycological Studies* is an uncanny book one that suggests that the divides between the sentient and the unconscious are frequently bridged in subtle and mysterious ways

**A Century of Mycology** Brian Sutton, 1996-05-02 British mycologists have had a major impact worldwide Commemorating the centenary of the British Mycological Society founded in 1896 this book gives an account of the British contribution to mycology both at professional and amateur level A variety of distinguished British and American authors give an authoritative commentary on the state of mycology and on potential future developments in fields in which British mycologists made important breakthroughs The book is introduced by an overview of the British contribution and personal views on pioneering work on aquatic hyphomycetes tropical mycology and the amateur contribution Later review articles treat a number of subjects in depth such as physiology systematics ecology chemistry and mapping This unique book will be of great interest to all professional and amateur mycologists in both research and teaching

**Advanced Microscopy in Mycology** Tanya E. S. Dahms, Kirk J. Czymmek, 2015-10-30 The aim of this volume is to describe the latest advances in microscopic methods including integrated techniques as applied to mycology Each chapter will provide a brief overview of a particular microscopic method with associated advantages and limitations the research questions that can be appropriately addressed using these microscopic methods how it has been successfully applied to address mycological research questions including supporting and complimentary techniques and which future questions can be addressed

*Applied Mycology* Mahendra Rai, P. D. Bridge, 2009-01-01 This book is intended to provide both students and researchers with a broad background to some of the fastest developing areas in current applied mycology A range of contributions are given to highlight the diverse nature of current applied mycology research The opening chapter of this volume provides some examples of how mycology is often neglected and presents a case for considering mycology as a megascience The subsequent chapters have been loosely grouped into four sections in order to reflect the wider customers or context of the particular mycological areas or activities In each section contributions that show either new applications or developments of well established technology or novel research into new technology or environments are included The section

on environment agriculture and forestry is represented by contributions that illustrate novel fungal associations or new aspects of well known interactions The section on foods and medicine reflects the long history of applied mycology in the manufacture of alcoholic beverages with two chapters devoted to beer production and winery spoilage issues Chapters in the section on biotechnology and emerging science reflect some of the current interests in fungal enzymes and their importance in broader environmental processes and applications
