Mycotoxins in Foodstuffs Martin Weidenbörner,2014-01-24 Mycotoxin contamination of food occurs as a result of crop invasion by field fungi such as Fusarium spp Alternaria spp Aspergillus spp and Penicillium spp which start their growth while in storage storage fungi In the worst case these fungi produce secondary metabolites called mycotoxins They can be very harmful to humans and animals when for example they are consumed through food Mycotoxins have various negative effects on several organs in humans and animals The present book gives a basic overview of the main mycotoxins in food It lists the predisposition of a foodstuff for mycotoxin contamination the degree of contamination concentration and country of detection origin for each case of mycotoxin contamination of food Major updates to this second edition include More than 750 new publications concerning mycotoxins in foodstuffs 1665 literatures at all A single chapter overview of mycotoxin s in the corresponding foodstuff The co occurrence of mycotoxins in a foodstuff has been listed where possible Numerical and alphabetical literature Organic and conventional foods of a publication have been listed separately where possible Numerous entries described in much greater detail Each analyzed foodstuff has a separate entry per year where possible

**Foodstuffs – 3** M. Jemmali,2017-04-07 Mycotoxins in Foodstuffs 3 is a collection of invited lectures presented at the International Union of Pure and Applied Chemistry s Third International Symposium on Mycotoxins in Foodstuffs held in Paris France on September 16 18 1976 The papers explore the health hazards posed by mycotoxins found in foodstuffs including aflatoxins and trichothecenes as well as ways of addressing the problem This book is comprised of 11 chapters and begins with a discussion on how to design a program for monitoring problem foods and surveying potential problem foods for a number of mycotoxins The next chapter describes a methodology for the design and evaluation of testing programs to estimate aflatoxin concentrations in granular foodstuffs The action taken by various countries regarding mycotoxins in foodstuffs food and feed under legislative provision or code of practice is then examined Subsequent chapters deal with the metabolism of aflatoxin and other mycotoxins in relation to their toxicity and the accumulation of residues in animal tissues mode of action of trichothecenes and mode of action and human health aspects of aflatoxin carcinogenesis The human health hazards associated with mycotoxins are also considered along with prevention elimination and detoxification of aflatoxins This monograph will be a useful resource for chemists nutritionists food scientists and toxicologists    **Mycotoxins in Food and Beverages** Didier Montet,Catherine Brabet,Ramesh C. Ray,Sabine Galindo,2021-06-11 Mycotoxins are secondary metabolites produced by fungi in a wide range of foods cereals peanut tree nuts dried fruits coffee cocoa grapes spices both in the field and after harvest particularly during storage They can also be found in processed foods of plant origin or by

transfer in food products of animal milk eggs meat and offal Mycotoxins are of major concern since they can cause acute or chronic intoxications in both humans and animals which are sometimes fatal Many countries particularly in Europe have set maximum acceptable levels for mycotoxins in food and feed The book reviews the latest literature and innovations on important aspects of mycotoxins e g mycotoxin producing fungi and the related ecosystems mycotoxin occurrence toxicity analysis and management Quantitative estimations of impacts of climate change on mycotoxin occurrence have been made recently using predictive modelling There is also a growing interest in the occurrence and toxicity of multiple mycotoxins in food and feed including emerging or modified forms of mycotoxins Innovative tools were also developed to detect and quantify toxinogenic fungi and their toxins In order to reduce the use of chemicals that are harmful to the environment and health of consumers alternative methods of prevention and decontamination of mycotoxins were tested in pre and post harvest using microorganisms natural substances or radiation treatments

**Masked Mycotoxins in Food** Chiara Dall'Asta, Franz Berthiller, 2015-11-05 The first book to cover this fast developing field Masked Mycotoxins in Food will provide a full overview of the issues relating to the toxicology of masked mycotoxins present in food products Mycotoxins are naturally occurring chemicals produced by moulds that can grow on crops and foodstuffs Masked mycotoxins are modified mycotoxins due to this modification many cannot be detected using standard analytical techniques for example HPLC and ELISA and further research is needed to understand the health risks and threats from these modified compounds Masked mycotoxin research is an area of toxicological research that has gained significant interest and momentum in recent years The aim of this book is to provide a full picture of the topic from the masked mycotoxin formation in plants to their catabolic fate in humans The book also provides new insights and will highlight possible gaps in the knowledge base of this relatively new area Edited and written by World renowned experts working within the field this book is of interest to toxicologists and biochemists but also food scientists and agricultural researchers working in industry and academia
