*NASA's Voyager Missions* Ben Evans, David M. Harland, 2008-02-26 For the first time in one volume Ben Evans with David Harland will not only tell the story of the hugely successful Voyager missions but also that of the men and women who have devoted their entire working lives to them Illustrated with stunning images some in color they describe the missions from their conception through their spectacular encounters with the outer planets and on to their ultimate and as yet unknown destination among the stars in the so called Voyager Interstellar Mission *NASA's Pioneer and Voyager Missions* Charles River Editors, 2019-09-07 Includes pictures Includes a bibliography for further reading Today the Space Race is widely viewed poignantly and fondly as a race to the Moon that culminated with Apollo 11 winning the Race for the United States In fact it encompassed a much broader range of competition between the Soviet Union and the United States that affected everything from military technology to successfully launching satellites that could land on Mars or orbit other planets in the Solar System Moreover the notion that America won the Space Race at the end of the 1960s overlooks just how competitive the Space Race actually was in launching people into orbit as well as the major contributions the Space Race influenced in leading to today's International Space Station and continued space exploration Space exploration was always an expensive business and throughout NASA's history the agency has had to justify to Congress its need for every dollar it intended to spend This problem has helped NASA to be more careful and more creative with the money they did receive and scientists had to justify the equipment they wanted to include on each space probe They had to justify the size and the power demand too If they wanted too much the entire mission might be scrubbed and all their work would have been for naught This made planning and designs leaner and more efficient as scientists and engineers were more careful with their recommendations At the same time scientists have been repeatedly surprised by their discoveries Some of those discoveries revealed the dangers of space like the Van Allen radiation belt dangerous to astronauts without the right kind of protection NASA also discovered the massive radiation belt surrounding Jupiter thanks to the Pioneer probes in 1973 and 1974 Similarly with the knowledge that Titan the largest moon of Saturn has a thick atmosphere later missions were sent to investigate the moon up close Thus the Huygens lander pierced the Titan atmosphere in January of 2005 to investigate Although Apollo 11's successful mission to the Moon is seen as the culmination of the Space Race and the Apollo program remains NASA's most famous one of the space agency's most successful endeavors came a few years later In fact the Pioneer program was the most diversified sequence of any of NASA's programs and though they're now remembered for being among the first probes in history to reach the Outer Solar System the elaborate planning changed goals several times over several years before resulting in historic successes NASA had wanted to do a Grand Tour of the Solar System toward the end of the 1970s to take advantage of the scheduled alignment of planets which meant the Pioneer missions were meant to be test runs prior to the main events Voyager 1 and Voyager 2 and a great many things discovered by Pioneer 10 and Pioneer 11 were essential to the successful

planning of the Voyager probes In 1977 the Voyager spacecraft were launched from Earth to explore the outer Solar System and incredibly the now ancient technology from the 1970s is still working sending daily reports back to the planet that sent the two robotic envoys on their way over 40 years ago Voyager 1 and 2 have done far more than accomplish their original missions In fact they are now exploring interstellar space far beyond the outer planets in the cold wasteland between the stars Each spacecraft carries a copy of a golden record which contains an introduction to Earth should some alien civilization happen to encounter either Voyager 1 or Voyager 2 In the first Star Trek movie writers imagined just that creating a story of a Voyager spacecraft being captured and adapted for its own uses *Critical Issues in the History of Spaceflight* Stephen J. Dick, Steven J. Dick, Roger D. Launius, 2006 In March 2005 the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history This volume is a collection of essays based on those deliberations The meeting took place at a time of extraordinary transformation for NASA stemming from the new Vision of Space Exploration announced by President George W Bush in January 2004 to go to the Moon Mars and beyond This Vision in turn stemmed from a deep reevaluation of NASA's goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experience Amazon *Critical issues in the history of spaceflight* Steven J. Dick, 2018 **Satellite Technology** Anil K. Maini, Varsha Agrawal, 2011-06-09 A comprehensive single source reference on satellite technology and its applications Satellite Technology Principles and Applications Second Edition includes the latest developments on the topic Covering the features and facilities of satellites and satellite launch vehicles with an emphasis on the fundamental principles and concepts the authors provide readers with a complete understanding of the technology This book explains the past present and future satellite missions as well as non communication related applications Coverage ranges from remote sensing and navigational uses to meteorological and military areas This second edition contains an additional chapter on earth station design and gives extensive focus to space based weapon systems satellite interference and future trends in satellite technology Extra information has also been provided on all of the first edition's topics to enhance the existing coverage Fully updated new edition with latest technological developments Covers the full range of important applications such remote sensing weather forecasting navigational scientific and military applications Amply illustrated with figures and photographs this book also contains problems with solutions which is of benefit students at undergraduate and graduate levels An indispensable book for professionals and students in the field of satellite technology Companion website provides a complete and updated compendium on satellites and satellite launch vehicles **Dreams of Other Worlds** Chris Impey, Holly Henry, 2016-04-19 The story of unmanned space exploration from Viking to today Dreams of Other Worlds describes the unmanned space missions that have opened new windows on distant worlds Spanning four

decades of dramatic advances in astronomy and planetary science this book tells the story of eleven iconic exploratory missions and how they have fundamentally transformed our scientific and cultural perspectives on the universe and our place in it The journey begins with the Viking and Mars Exploration Rover missions to Mars which paint a startling picture of a planet at the cusp of habitability It then moves into the realm of the gas giants with the Voyager probes and Cassini s ongoing exploration of the moons of Saturn The Stardust probe s dramatic round trip encounter with a comet is brought vividly to life as are the SOHO and Hipparcos missions to study the Sun and Milky Way This stunningly illustrated book also explores how our view of the universe has been brought into sharp focus by NASA s great observatories Spitzer Chandra and Hubble and how the WMAP mission has provided rare glimpses of the dawn of creation Dreams of Other Worlds reveals how these unmanned exploratory missions have redefined what it means to be the temporary tenants of a small planet in a vast cosmos
