This handbook NASA Systems Engineering Handbook is intended to provide general guidance and information on systems engineering that will be useful to the NASA community. It provides a generic description of Systems Engineering SE as it should be applied throughout NASA. A goal of the handbook is to increase awareness and consistency across the Agency and advance the practice of SE. This handbook provides perspectives relevant to NASA and data particular to NASA. This handbook describes systems engineering best practices that should be incorporated in the development and implementation of large and small NASA programs and projects. The engineering of NASA systems requires a systematic and disciplined set of processes that are applied recursively and iteratively for the design development operation maintenance and closeout of systems throughout the life cycle of the programs and projects. The scope of this handbook includes systems engineering functions regardless of whether they are performed by a manager or an engineer in house or by a contractor. **NASA SYSTEMS ENGINEERING HANDBOOK.**

Changes include implementing standards in the International Organization for Standardization ISO 9000 the use of Carnegie Mellon Software Engineering Institute's Capability Maturity Model Integration CMMI r to improve development and delivery of products and the impacts of mission failures. Lessons learned on systems engineering were documented in reports such as those by the NASA Integrated Action Team NIAT the Columbia Accident Investigation

Board CAIB and the follow on Diaz Report Out of these efforts came the NASA Office of the Chief Engineer OCE initiative to improve the overall Agency systems engineering infrastructure and capability for the efficient and effective engineering of NASA systems to produce quality products and to achieve mission success In addition Agency policy and requirements for systems engineering have been established This handbook update is a part of the OCE sponsored Agency wide systems engineering initiative In 1995 SP 6105 was initially published to bring the fundamental concepts and techniques of systems engineering to NASA personnel in a way that recognizes the nature of NASA systems and the NASA environment This revision of SP 6105 maintains that original philosophy while updating the Agency s systems engineering body of knowledge providing guidance for insight into current best Agency practices and aligning the handbook with the new Agency systems engineering policy The update of this handbook was twofold a top down compatibility with higher level Agency policy and a bottom up infusion of guidance from the NASA practitioners in the field The approach provided the opportunity to obtain best practices from across NASA and bridge the information to the established NASA systems engineering process The attempt is to communicate principles of good practice as well as alternative approaches rather than specify a particular way to accomplish a task The result embodied in this handbook is a top level implementation approach on the practice of systems engineering unique to NASA The material for updating this handbook was drawn from many different sources including NASA procedural requirements field center systems engineering handbooks and processes as well as non NASA systems engineering textbooks and guides
