Oystercatcher From Individuals To Populations:

The Oystercatcher John Goss-Custard, 1996 This book reviews what is known about the behavior and population ecology of a popular shorebird from a scientific conservation perspective The plight of this bird highlights the many conflicts of interest in coastal zones between human activities such as shellfishing land reclamation barrage construction and industrial pollution and the needs of wildlife for food and suitable habitats As well as detailing Oystercatcher natural history including the well known specialization in feeding technique shown by individuals the authors use their field studies of individual variations in behaviour to produce population models This novel approach provides tools for predicting how populations will respond to the many environmental changes to which the coastal zone is subject It thus can play a role in coastal management schemes that seek to balance the needs of people and wildlife and suggests that the same methods can be applied in other situations The volume contains fifteen well integrated chapters by an international team of contributors and is fully referenced

Shorebirds Jan van de Kam, Bruno Ens, Theunis Piersma, Leo Zwarts, 2017-03-27 Shorebirds are the most visible inhabitants of coastal wetlands worldwide Many undertake spectacularly long flights between their wintering and breeding grounds embodying the miracle of long distance migration in a profound way In this illustrated behavioural ecology the migration feeding and breeding of these birds are explained in a comprehensive but simple and visually stunning form The core of the book is based on studies of shorebirds and other waterbirds such as ducks geese and gulls that migrate along the East Atlantic Flyway The emphasis is on those using the Dutch German and Danish Wadden Sea examples from the rest of the world are also included The authors are experts in the fields of bird migration shorebird behaviour and intertidal ecology and have contributed much to our current understanding of these subjects The 300 magnificent portraits of waterbirds in action were taken by Jan van de Kam one of The Netherlands foremost wildlife photographers

Advances in the Study of Behavior, 2014-05-16 Advances in the Study of Behavior was initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior That number is still expanding This volume makes another important contribution to the development of the field by presenting theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields Initiated over 40 years ago to serve the increasing number of scientists engaged in the study of animal behavior Makes another important contribution to the development of the field Presents theoretical ideas and research to those studying animal behavior and to their colleagues in neighboring fields
