Materials Processing Lorraine F. Francis, 2024-04-25 Materials Processing A Unified Approach to Processing of Metals Ceramics and Polymers Second Edition is the first textbook to bring the fundamental concepts of materials processing together in a unified approach that highlights the overlap in scientific and engineering principles. It teaches students the key principles involved in the processing of engineering materials specifically metals, ceramics and polymers from starting or raw materials through to the final functional forms. Its self-contained approach is based on the state of matter most central to the shaping of the material melt, solid, powder, dispersion and solution and vapor. With this approach students learn processing fundamentals and appreciate the similarities and differences between the materials classes. This fully updated edition includes expanded coverage on additive manufacturing as well as adding a new section on machining. The organization has been modified and a greater emphasis has been placed on the fundamentals of processing and manufacturing methods. This book can be utilized by upper level undergraduates and beginning graduate students in Materials Science and Engineering who are already schooled in the structure and properties of metals, ceramics and polymers and are ready to apply their knowledge to materials processing. It will also appeal to students from other engineering disciplines who have completed an introductory materials science and engineering course. Includes comprehensive coverage on the fundamental concepts of materials processing. Provides coverage of metals, ceramics and polymers in one text. Presents examples of both standard and newer additive manufacturing methods throughout. Gives students an overview on the methods that they will likely encounter in their careers.

Materials Processing in High Gravity Liya L. Regel, William R.

Wilcox, 2012-12-06 There are two motives for studying materials processing in centrifuges First such research improves our understanding of the influence of acceleration and convection on materials processing Second there are commercial opportunities for production of unique and improved materials that cannot be prepared under normal earth conditions or in space Through a combination of experiments and theory we are gaining an understanding of centrifugation on phenomena of importance to materials processing We find that it is necessary to consider not only acceleration but also the Coriolis effect and the variation of acceleration with position As one consequence the vigor of buoyancy driven convection is sometimes increased by centrifugation and sometimes decreased Similarly the tendency of the convection to become unstable or oscillatory may either be increased or decreased by centrifugation On the other hand the observed effects of centrifugation on product quality have largely gone unexplained This volume constitutes the proceedings of The Second International Workshop on Materials Processing at High Gravity hosted by Clarkson University in June of 1993 The concept for a workshop on materials processing in centrifuges was born at a series of informal meetings held in Paris in 1990 The First International Workshop on Materials Processing at High Gravity was held in May of 1991 in Dubna USSR on the banks of the Volga River The proceedings of this workshop was published in 1992 as a special issue of the Journal of Crystal Growth
