Materials Science And Technology Challenges For The Chemical Sciences In The 21st Century:

Materials Science and Technology National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Challenges for the Chemical Sciences in the 21st Century, Organizing Committee for the Workshop on Materials and Manufacturing, 2003-06-16 The report assesses the current state of chemistry and chemical engineering at the interface with materials science and identifies challenges for research Recent advances are blurring the distinction between chemistry and materials science and are enabling the creation of new materials that to date have only been predicted by theory These advances include a greater ability to construct materials from molecular components to design materials for a desired function to understand molecular self assembly and to improve processes by which the material is engineered into the final product

Information and Communications National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Committee on Challenges for the Chemical Sciences in the 21st Century, Organizing Committee for the Workshop on Information and Communications, 2003-11-28 Since publication of the National Research Council NRC reports on chemistry in 1985 and chemical engineering in 1988 1 2 dramatic advances in information technology IT have totally changed these communities During this period the chemical enterprise and information technology have enjoyed both a remarkably productive and mutually supportive set of advances These synergies sparked unprecedented growth in the capability and productivity of both fields including the definition of entirely new areas of the chemical enterprise The chemical enterprise provided information technology with device fabrication processes new materials data models methods and most importantly people In turn information technology provided chemical science and technology with truly remarkable and revolutionary resources for computations communications and data management Indeed computation has become the strong third component of the chemical science research and development effort joining experiment and theory Sustained mutual growth and interdependence of the chemical and information communities should take account of several unique aspects of the chemical sciences These include extensive and complex databases that characterize the chemical disciplines the importance of multiscale simulations that range from molecules to technological processes the global economic impact of the chemical industry and the industry's major influence on the nation's health environment security and economic well being In planning the future of the chemical sciences and technology it is crucial to recognize the benefits already derived from advances in information technology as well as to point the way to future benefits that will be derived

Performance and Accountability Report National Science Foundation (U.S.), 2004 The Engineer of 2020 National Academy of Engineering, 2004-06-14 To enhance the nation's economic productivity and improve the quality of life worldwide engineering education in the United States must anticipate and adapt to the dramatic changes of engineering practice The Engineer of 2020 urges the engineering profession to recognize what engineers can build for the future through a wide range of leadership roles in industry government and academia not just through technical jobs

Engineering schools should attract the best and brightest students and be open to new teaching and training approaches. With the appropriate education and training the engineer of the future will be called upon to become a leader not only in business but also in nonprofit and government sectors. The book finds that the next several decades will offer more opportunities for engineers with exciting possibilities expected from nanotechnology, information technology, and bioengineering. Other engineering applications such as transgenic food technologies that affect personal privacy and nuclear technologies raise complex social and ethical challenges. Future engineers must be prepared to help the public consider and resolve these dilemmas along with challenges that will arise from new global competition requiring thoughtful and concerted action if engineering in the United States is to retain its vibrancy and strength.
