**Maternal Nutrition and Child Health** Douglas R. Shanklin, Jay Hodin, 1979 Abstract The nutritional status of the pregnant women is being recognized as one of the most important factors in the development of a baby both pre and postnatally Malnutrition can cause sterility spontaneous abortion stillbirth premature birth deformities and mental retardation Statistics from many sources such as European clinics during WWII and current figures from hospital observations all over the country have been collected and compiled to provide information on prenatal and early childhood development in relation to nutrition in three ways physiologically neurologically and behaviorally Low birth weight is the measurement most closely associated with the incidence of neonatal disorders and is shown to be closely related also to maternal nutrition Reproductive casualties particularly in regard to handicapped children can be greatly decreased by better education and nourishment of expectant mothers     **Size at Birth** Katherine Elliott, Julie Knight, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world

*Functional Nutritional Strategies as Alternatives to Antimicrobials* Matteo Dell'Anno, Luciana Rossi, Francesca Riva, Monika Hejna, 2025-12-08 The field of veterinary medicine is currently grappling with the challenge of antimicrobial resistance a problem exacerbated by the misuse and overuse of antimicrobials in the last decades This has led to stricter regulations and a pressing need for alternative approaches that can maintain the effectiveness of antimicrobial treatments while limiting the development of resistance The exploration of functional nutritional strategies including the use of functional feed additives and ingredients such as natural extracts and agro industrial by products has emerged as a promising avenue These strategies which include the supplementation of probiotics prebiotics and plant extracts have the potential to protect animals against diseases enhance their health and promote the sustainability of livestock and pet practices The primary aim of this Research Topic is to delve into the potential of functional nutritional strategies as viable

alternatives to antibiotic treatments in both livestock and pets. The goal is to showcase cutting edge original articles and reviews that highlight the effectiveness, mechanisms of action and practical applications of these nutritional strategies in preventing microbial infections, enhancing animal health and promoting sustainable farming practices. We seek to investigate the potential of agricultural waste valorization, natural extracts and microbial products in promoting animal health and mitigating the occurrence of pathological conditions all while considering the positive impact on human and environmental health. The scope of this Research Topic is twofold. Firstly it involves studies that evaluate innovative dietary strategies as viable alternatives to antibiotic treatments in both livestock and pets. Secondly it invites authors to submit articles and reviews exploring the characteristics, efficacy, mechanisms and practical applications of functional products. This includes but is not limited to the following themes: The role of probiotics, prebiotics, plant extracts, essential oils and other functional additives or ingredients in modulating the microbiome, immune system, metabolome and proteome. Strategies for enhancing oxidative stress and reducing the occurrence of pathology. The positive impacts of feeding strategies on animal, human and environmental health. Through this comprehensive exploration the Research Topic aims to enrich the scientific knowledge of functional nutritional strategies and their significance in reducing antibiotic use and promoting animal health and welfare.

Maternal nutritional status affects the offspring's health development significantly during early embryogenesis, pregnancy, birth and lactation and subsequently determines health during growth and even throughout adulthood. On the other end of the human lifetime scale the importance of maternal nutrition expands into the time period before conception. Pre conception nutritional status not only influences fertility but also embryogenesis and life long health. Predisposition for coronary heart diseases, Type 2 diabetes mellitus and hypertension can be caused by intrauterine adaptations to fetal malnutrition. Hence optimizing nutrition for women during their reproductive period can be expected to have a great impact on the well being of the next generation. This workshop dealt with the effects of maternal nutrition on fetal growth, metabolic programming, energy and nutrient requirements as well as under and over nutrition during pregnancy. Finally it addressed the question of whether a distinct diet during pregnancy could reduce food allergy in the progeny. This book is a valuable and complete source of knowledge for all professionals involved in pediatrics, nutrition, policy, women's health, immunology, epidemiology and public health. **Oxford Textbook of Global Health of Women, Newborns, Children, and Adolescents** Delan Devakumar, Jennifer Hall, Zeshan Qureshi, Joy Lawn, 2019.
