Elasto-plastic Analysis of Structures Under Load and Two-dimensional Temperature Distributions P. C. Huang, R. J. Edwards, 1962 This report describes investigations performed to determine experimentally the validity of the time independent aspects of a time dependent elasto plastic stress and strain analysis method for structures exposed to complex load and two dimensional elevated temperature environments Experiments consisting of tests of long flat plates subjected to uniaxial loads and temperatures which varied in two directions are described These were specifically designed to evaluate the accuracy of the analysis method Magnitude and duration of the test variables were such that the strains induced by loading were in the plastic range and appreciable thermal stress systems were induced Significant creep strains were eliminated by short time continuous loading Experimental strains were compared with analytical strains calculated for conditions identical with the tests Within the range of test parameters selected the degree of correlation achieved indicates verification of the time independent portion of the analysis method

Temperature Behavior of Bridges Yong Xia, Yi Zhou, 2025-02-11 Bridges are subject to daily and seasonal temperature fluctuations The temperature variations can affect bridge materials and structural integrity often interacting with other loads and masking their effects Understanding temperature behaviors is crucial for accurate load assessment and bridge performance evaluation This book comprehensively studies temperature behaviors of

bridges covering beam arch cable stayed and suspension bridges using analytical numerical and field monitoring approaches For each type of bridge it not only reports field monitoring results but also presents an integrated heat transfer and structural analysis framework significantly enhancing the efficiency of simulating bridge temperature behaviors Moreover this book derives simple and general analytical formulas for temperature induced deformations of bridges that can be easily adopted by engineers This standout feature has not been previously studied and reported within academic and engineering societies A unique feature of this book is the presentation of 25 year field monitoring data of the Tsing Ma Suspension Bridge the most extensive field data available showing the long term behavior of the bridge This invaluable data demonstrates the effects of global warming on infrastructure and necessitates the review of current design codes in the context of climate change Other typical bridges including the Hong Kong Zhuhai Macao Bridge and the Hong Kong Polytechnic University Footbridge are also used as examples to enhance understanding Temperature Behavior of Bridges is an essential resource for postgraduate students researchers and engineers seeking to master the temperature behaviors affecting modern bridge infrastructure
