Paradigm Change In Technology:

Paradigm Shift in Technologies and Innovation Systems John Cantwell, Takabumi Hayashi, 2019-11-02 This book provides some new ideas on the conceptualization of a shift in technological paradigm and it explores in depth the relevance of this concept for research on innovation systems. It examines text mining software and analyzes patent data as well as academic and business journals to illustrate the paradigm shift of newly emerging technologies such as the all solid state battery and automatic driving for electric vehicles and surgical robots. It also explores the critical role of emerging software technologies by examining US, EU, and Japanese patent statistics. Highlighting the paradigm shift of technologies since the 1990s and the geographical dispersion of innovative capabilities, it identifies essential trends toward new innovation systems as well as the concentration and dispersion of national and corporate R D capabilities that have taken place as a result. In this new paradigm, the competitiveness of a company is decisively determined by other innovations in systems and management. Since the 1990s, when a network economy began to be established and technological know-how came to be easily transferred across borders, the changing structure of technological activities has required organizations with traditional integral and closed architecture models to move toward open innovation or modular architectures. These changes involve wider technological areas and cognitive diversity among international inter-firm and intra-firm R D networks. This book is highly recommended not only to academicians but also to business people seeking an in-depth and up-to-date overview of the paradigm shift of technologies and new innovation systems.

Paradigm Shift Don Tapscott, Art Caston, 1993 PARADIGM SHIFT explores changes in the nature and role of information technology in business in the late 20th century. This is an important book. Executives who ignore it do so at their own peril. The authors argue persuasively that the information age is entering a second era, one marked by decentralization, empowerment, and affordability. The consequences are both hopeful and far-reaching. Paul Allaire, Chairman and CEO, Xerox Corporation.

Responsible Design, Implementation and Use of Information and Communication Technology Marié Hattingh, Machdel Matthee, Hanlie Smuts, Ilias Pappas, Yogesh K. Dwivedi, Matti Mäntymäki, 2020-04-06 This two-volume set constitutes the proceedings of the 19th IFIP WG 6.11 Conference on e-Business, e-Services, and e-Society (I3E 2020) held in Skukuza, South Africa, in April 2020. The total of 80 full and 7 short papers presented in these volumes were carefully reviewed and selected from 191 submissions. The papers are organized in the following topical sections: Part I: block chain, fourth industrial revolution, eBusiness, business processes, big data, and machine learning, and ICT and education; Part II: eGovernment, eHealth, security, social media, knowledge and knowledge management, ICT and gender equality, and development, information systems for governance, and user experience and usability. Due to the global COVID-19 pandemic and the consequential worldwide imposed travel restrictions and lockdown, the I3E 2020 conference event scheduled to take place in Skukuza, South Africa, was unfortunately cancelled.
