## **Maintenance Of Knowledge Based Systems:**

**Maintenance of Knowledge-based Systems** Frans Coenen,Trevor J. M. Bench-Capon,1993 The practical take up of Knowledge Based Systems KBSs is usually described as disappointing One explanation of the reluctance of organisations to make a real commitment to these systems stems from the lack of well defined techniques to engineer them in an acceptable manner Without the assurance of quality that can be given by the use of a proven methodology the risk of investing substantially in these systems will remain a risk too great to be taken One of the chief manifestations of the lack of these techniques is that it is impossible to say with any assurance that it will be possible to maintain the systems so that their useful life can be extended This book is concerned with the maintenance of KBSs providing a balance between the academic and the practical and containing analysis of tools developed in a research project The intention of the book is to move from very general concerns available to all systems through to specific techniques and tools designed to address particular problems in particular representations before concluding with some more general remarks This book is essential reading for anyone whether in a commercial or academic environment who wishes to build a serious Knowledge Based System that will continue to be used over a period of time **SPECIAL FEATURES** Building a Knowledge Based System is not the end of the story the system must be used and during its period of use the knowledge on which it relies will change and develop A Knowledge Based System that is not to become rapidly obsolete must change and develop with it This book addresses this neglected area of maintenance emphasising the specific maintenance tasks required by a Knowledge Based System The book provides a balance between the academic and the practical and containing analysis of tools developed in a research project

**Development of Knowledge-Based Systems for Engineering** Carlo Tasso,Edoardo R.de Arantes e Oliveira,2014-05-04 The goal of the volume is twofold to help engineers to understand the design and development process and the specific techniques utilized for constructing expert systems in engineering and secondly to introduce computer specialists to significant applications of knowledge based techniques in engineering Among the authors are world famous experts of engineering and knowledge based systems development *Building Knowledge-Based Systems for Natural Resource Management* Daniel L. Schmoldt,H. Michael Rauscher,2012-12-06 If one were forced to use a single key word to describe the decade of the 1980s a very prominent one would be technology Leading the forefront of technology advancement were breakthroughs in electronics Devices that were uncommon or unknown in 1980 became commonplace and almost indispensable by 1989 This trend has continued into the 1990s and it does not seem to be abating in any way Microwave ovens video recorders telephone answering machines compact disc players computers and a host of smaller or less sophisticated devices now appear in most households The development of small and inexpensive computers i.e personal computers has placed computing resources within reach of many more people In addition many traditional and largely mechanical devices have been enhanced by electronics For example specialized microprocessors are combined with arrays of

electronic sensors to control and monitor sophisticated engineering components in most new auto mobiles In this and many other ways we are touched by the new electronics in almost every aspect of our daily lives Initially personal computers were little more than toys They contained only a small fraction of the computing power of their immediate ancestors the mini computers and mainframe computers However rapid improvements in integrated circuit design and chip manufacture produced regular reductions in size and cost of computer components During the same time processor speed and sophistication increased *IJCAI-97 International Joint Conferences on Artificial Intelligence,1997*

**Industrial and Engineering Applications of Artificial Intelligence and Expert Systems** Graham F. Forsyth,Moonis Ali,1995-08-08 In the areas of industry and engineering AI techniques have become the norm in sectors including computer aided design intelligent manufacturing and control Papers in this volume represent work by both computer scientists and engineers separately and together They directly and indirectly represent a real collaboration between computer science and engineering covering a wide variety of fields related to intelligent systems technology ranging from neural networks knowledge acquisition and representation automated scheduling machine learning multimedia genetic algorithms fuzzy logic robotics automated reasoning heuristic searching automated problem solving temporal spatial and model based reasoning clustering blackboard architectures automated design pattern recognition and image processing automated planning speech recognition simulated annealing and intelligent tutoring as well as various computer applications of intelligent systems including financial analysis artificial **Knowledge-based Systems** Oscar N. Garcia,Yi-Tzuu Chien,1991 This tutorial text a collection of selected papers preceded by extensive introductory material is intended particularly for practicing computer engineers and scientists as well as for advanced undergraduate or graduate students who want to refine their conceptual and practical appreciation of the fundamentals and tools of knowledge based systems The goal in choosing the 35 papers reviewed which covers a publication span of nine years is to both bring forth the recent and rapid evolution of the field and give a brief and up to date account of where we stand today This tutorial integrated presentation selects papers that present fundamentals and tools and provide copious references to other work in applications and research The aim is to put into perspective the range of what is possible and to avoid common pitfalls in the definition development management and use of knowledge based systems

**Encyclopedia of Computer Science and Technology** Allen Kent,James G. Williams,1995-02-14 Compiler Construction to Visualization and Quantification of Vortex Dominated Flows **StarBriefs 2001** ,2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations

acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

**Design and Development of Knowledge-Based Systems** Giovanni Guida,Carlo Tasso,1994-07-12 This book focuses on how to develop large scale Knowledge Based Systems within budget and on time The authors teach step by step techniques through the knowledge based system life cycle from the initial development to maintenance of the system

Richardson,1995 By focusing on knowledge based systems technology the primary purpose and goal of this book is to improve the quality of reference service rendered in libraries Within reference service this book examines question answering a complex and difficult task For those interested in the theoretical aspects of reference work they have to look no further than the first chapter In addition the book features theoretical chapters on modelling the reference transaction a chapter on the logic of ready reference work and a chapter on the appropriate criteria to apply in selecting an expert system shell Several practical chapters focus on what KBS work has already been done in the field and evaluate nearly fifty expert system development shells so that readers can select the most appropriate shell for their domain The subtitle of the book is applications problems and progress in regard to expert systems in reference work Applications are covered most clearly in chapter 8 which reviews the more than extant prototypes Chapter 3 covers what is feasible chapter 4 models the reference transaction and chapter 7 covers interface issues so that future applications can be more successful Problems are covered throughout the book starting with chapter 1 which discusses the traditional emphasis on reference sources It argues that the field needs to shift toward procedural knowledge related to work in reference departments The chapter on expert system feasibility reveals that there are alternative ways of conceptualizing the intellectual work of an expert and of course chapter 9 directly points out limitations in extant systems Encouraging words occur in chapter 1 about the shift to a balanced or complete paradigm for doing reference work Similarly the chapter on modelling is optimistic in that reference work can be modelled and systems implemented which act like human experts The final chapter tries to avoid the technological optimism inherent in many books on expert systems by identifying the near term factors which will influence the development of expert systems Key Features Historical background presenting the field s paradigmatic thinking Decision trees for basic formats of reference material Flowchart modelling the reference transaction Reviews of more than fifty extant KBS in general reference environments Evaluative criteria on more than forty expert system shells      **Encyclopedia of Library and Information Science** Allen Kent,Harold Lancour,William Z.
