Multiple Sclerosis (MS) - Basics to Mastery DEAN STRATTON, Written for curious beginners, students, clinicians in training, and informed patients, this guide explains the science and day-to-day realities of multiple sclerosis in clear, compassionate language. You'll learn how an immune-mediated attack on myelin disrupts brain and spinal cord signaling, how typical presentations such as optic neuritis, sensory change, imbalance, and weakness are evaluated, and how diagnosis uses clinical history plus MRI evidence of dissemination in time and space, sometimes supported by cerebrospinal fluid oligoclonal bands and the McDonald criteria. Understand current disease-modifying therapies, injectable, oral, and monoclonal, what they can and cannot do, and how acute relapses are treated, usually with high-dose corticosteroids, plasma exchange, or steroid refractory. Equally, this book emphasizes rehabilitation, fatigue, and mood management, heat sensitivity, cognition, exercise, nutrition, pregnancy planning, and shared decision making. A vivid opening vignette follows Aisha, a young designer, with sudden blurred vision through referral imaging, treatment choices, and building a relapse action plan, turning complex neurology into practical steps. Plain English primers, clinician-level sidebars, flowcharts, and a jargon-free glossary. Case vignettes and ask-your-neurologist checklists mapped to every stage of care: MRI lab walkthroughs, lesion patterns, dissemination rules, red flags, and pitfalls. Treatment landscape decoded, DMT classes, safety monitoring, vaccination timing, Daily living playbook, fatigue, pacing, mobility, cognition, work, travel, and heat. Practical tools: symptom tracker, flare diary, medication matrix, goal setting sheets.
