**Materials and Development of Plastics Packaging for the Consumer Market** Geoff A. Giles, David R. Bain, 2000  
Plastics packaging plays an increasing role in marketing conveying and protecting products in the fast moving consumer goods market Plastics packaging is lightweight and tough can be manufactured filled and packed at high speed contributing to reduced costs and the minimization of packaging in the supply chain Designed as a practical handbook **Materials and Development of Plastics Packaging for the Consumer Market** covers the materials and development of plastics packaging for food beverages household and personal care products The book takes you through the opportunities and performance elements related to the use of plastics materials in packaging Topics range from environmental considerations and recycling materials and development in this sector of the packaging industry and barrier properties in relation to types of plastics Dispensing and reclosing systems provide consumer convenience Tamper evident and child resistant closures contribute to safety At the end of their lifecycle plastics pack can be disposed of safely by a number of environmentally acceptable options mechanical recycling chemical recycling or incineration with energy recovery With the range of benefits available it is not surprising that plastics are the materials of choice for many packaging applications **Materials and Development of Plastics Packaging for the Consumer Market** gives you the information you need to make more informed choices in the selection and use of the available materials

**Handbook of Food Engineering** Dennis R. Heldman, Daryl B. Lund, Cristina Sabliov, 2018-12-19 As the complexity of the food supply system increases the focus on processes used to convert raw food materials and ingredients into consumer food products becomes more important The **Handbook of Food Engineering Third Edition** continues to provide students and food engineering professionals with the latest information needed to improve the efficiency of the food supply system As with the previous editions this book contains the latest information on the thermophysical properties of foods and kinetic constants needed to estimate changes in key components of foods during manufacturing and distribution Illustrations are used to demonstrate the applications of the information to process design Researchers should be able to use the information to pursue new directions in process development and design and to identify future directions for research on the physical properties of foods and kinetics of changes in the food throughout the supply system Features Covers basic concepts of transport and storage of liquids and solids heating and cooling of foods and food ingredients New chapter covers nanoscale science in food systems Includes chapters on mass transfer in foods and membrane processes for liquid concentration and other applications Discusses specific unit operations on freezing concentration dehydration thermal processing and extrusion The first four chapters of the Third Edition focus primarily on the properties of foods and food ingredients with a new chapter on nanoscale applications in foods Each of the eleven chapters that follow has a focus on one of the more traditional unit operations used throughout the food supply system Major revisions and or updates have been incorporated into chapters on heating and cooling processes membrane processes
