Guenther, 1995-02-24 Thin Films for Optical Coating emphasizes the applications of thin films deposition of thin films and thin film characterization Unlike monographs on this subject this book presents the views of many expert authors Individual chapters span a wide arc of topics within this field of study The book offers an introduction to usual and unusual applications of optical thin films treating in a more qualitative way general topics such as anticounterfeiting coatings decorative coatings light switches contrast enhancement coatings multiplexers optical memories and more Contributors review thin film media for optical data storage UV broadband and narrow band filters and optically active thin film coatings Ion beam sputtering and magnetron sputtering deposition methods are described in detail Characterization techniques are provided including Raman spectroscopy and absorption measurements The book also offers theories on light scattering of thin dielectric films and the electromagnetic properties of nanocermet thin films This reference incorporates recent research by the individual authors with their views of current developments in their respective fields Of particular interest to the reader will be an assessment of the historical developments of thin film physics written by one of the fathers of thin film technology Professor M Auw rter

Modern Magneto optics and Magneto optical Materials A.K Zvezdin, V.A Kotov, 1997-01-01 Modern Magneto optics and Magneto optical Materials provides a comprehensive account of the principles and applications of magneto optics bridging the gap between textbooks and specialist accounts in the research and review literature The book is aimed at the graduate physicist and electrical engineer but assumes no specialist knowledge of magneto optics Chapters have been designed to be reasonably independent so that readers in search of information on a particular topic can go straight to the appropriate place in the book with only occasional reference to material elsewhere Divided into three main parts the book begins with the principles of magneto optics to provide the necessary theoretical background This section s emphasis is on introducing practical considerations through examples taken from real life situations The next part surveys a wide range of magneto optic materials including metals alloys and granular structures The final part explores applications of magneto optics in practical devices such as modulators switches memory devices and waveguides This book provides a thorough introduction for graduate students of physics and electrical engineering and a useful reference for researchers The Handbook of Photonics Mool C. Gupta, John Ballato, 2018-10-03 Reflecting changes in the field in the ten years since the publication of the

first edition The Handbook of Photonics Second Edition explores recent advances that have affected this technology In this new updated second edition editor Mool Gupta is joined by John Ballato strengthening the handbook with their combined knowledge and the continued contributions of world class researchers New in the Second Edition Information on optical fiber technology and the economic impact of photonics Coverage of emerging technologies in nanotechnology Sections on optical amplifiers and polymeric optical materials The book covers photonics materials devices and systems respectively An introductory chapter new to this edition provides an overview of photonics technology innovation and economic development Resting firmly on the foundation set by the first edition this new edition continues to serve as a source for introductory material and a collection of published data for research and training in this field making it the reference of first resort

Frontiers of Materials Research: Electronic and Optical Materials Meiying Kong, 2012-12-02 Frontiers of Materials Research Electronic And Optical Materials Volume I is part of a five volume compilation of the proceedings of C MRS International 1990 Conference held in Beijing China The said conference discusses the areas of research in materials science The book is divided into three parts Part 1 covers topics involved in the development and progress of materials such as the focused beam ion intermetallic compounds polymers and the application of computers in the field Part 2 includes studies related to high Tc superconductors such as methods related to the field the effects of oxygen and partial pressure on the properties of superconducting and the study of superconductivity and crystallography Part 3 presents papers related optoelectronic materials and functional crystals which are mostly about the growth properties and uses of the different crystals being studied in each paper The text is recommended for scientists and engineers who would like to know more about the field of materials science especially those who would like to be involved in materials research Magneto-Optical Recording Materials Richard J. Mittal, 2012-12-06 This volume documents the proceedings of the Symposium on Polymers in Information Storage Technology held as a part of the American Chemical Society meeting in Los Angeles September 25 30 1988 It should be recorded here that this symposium was cosponsored by the Division of Polymeric Materials Science and Engineering and the Division of Polymer Chemistry Polymers are used for a variety of purposes in both optical and magnetic information storage technologies For example polymers find applications as substrate for storing information directly as protective coating as lubricant and as binder in magnetic media In the last few years there has been a high tempo of research activity dealing with the many ramifications of polymers in the exciting arena

of information storage Concomitantly we decided to organize this symposium and I believe this was the premier event on this topic This symposium was conceived and organized with the following objectives in mind 1 to bring together those actively involved polymer chemists polymer physicists photochemists surface and colloid chemists tribo10gists and so on in the various facets of this topic 2 to provide a forum for discussion of latest R 3 to provide an opportunity for cross pollination of ideas and 4 to identify and highlight areas within the broad purview of this topic which needed intensified or accelerated R D efforts
