Rabek, Jean-Pierre Fouassier, 1989-11-30 The purpose of this 4 volume set is to examine some of the applications of lasers in polymer science and technology Now available for the first time up to date information on this fascinating subject is compiled and presented in compact form This set focuses on current research and developments in the application of lasers in polymer and biopolymer chemistry It includes experimental and theoretical details apparatus techniques and applications This set is a useful source for researchers students polymer chemists and physicists involved in this astonishing field of high technology      The Chemical Industry C. A. Heaton, 2012-12-06 Background This book provides an introduction to the main sectors of the chemical industry and complements An Introduction to Industrial Chemistry subsequently referred to as Volume I which covers the physico chemical principles of the subject as well as introductory technical economics and chemical engineering Processes considered include the large scale production of polymers up to 1000 tonnes per day for a single plant the chlor alkali nitrogen sulphur and phosphorus industries and the production on a

smaller scale of dyestuffs pharmaceuticals and agrochemicals The rapidly developing area of biotechnology is dealt with under biological catalysis The consequences of scale of operation are also highlighted in Chapter 7 Each chapter includes common themes such as brief history present position major products and the future The final chapter links together the predictions made for the future of each sector to give an overall projection for the whole chemical industry the quadrupling of oil prices in 1974 and the widespread recession at the beginning of the 1980s provide a salutary lesson about the difficulty of such projections
