Materials Modification By Electronic Excitation

Antonio Miotello, Paolo Ossi

Materials Modification By Electronic Excitation:

Materials Modification by Electronic Excitation Noriaki Itoh, Marshall Stoneham, 2001 Electronic excitation is a means to change materials properties This book analyses the important features of the changes induced by electronic excitation identifies what is critical and provides a basis from which materials modification can be developed successfully Electronic excitation by lasers or electron beams can change the properties of materials In the last few years there has been a mix of basic science of new laser and electron beam tools and of new needs from microelectronics photonics and nanotechnology This book extends and synthesises the science addressing ideas like energy localisation and charge localisation with detailed comparisons of experiment and theory It also identifies the ways this understanding links to technological needs like selective removal of material controlled changes altering the balance between process steps and possibilities of quantum control This book will be of particular interest to research workers in physics chemistry electronic engineering and materials science

Materials Modification by Ion Irradiation Emile J. Knystautas, 1998 A study of materials modification by ion irradiation The papers address topics such as ion beam modification of polymers nanoclusters and nonlinear optics and photonic integrated circuits and quantum wells

[Materials Modification by Energetic Atoms and Ions: Volume 268](#)

Kenneth S. Grabowski, 1992-10-09 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

[Swift Heavy Ions for Materials Engineering and Nanostructuring](#) Devesh Kumar

Avasthi, Girijesh Kumar Mehta, 2011-05-24 Ion beams have been used for decades for characterizing and analyzing materials Now energetic ion beams are providing ways to modify the materials in unprecedented ways This book highlights the

emergence of high energy swift heavy ions as a tool for tailoring the properties of materials with nanoscale structures Swift heavy ions interact with materials by exciting ionizing electrons without directly moving the atoms This opens a new horizon towards the so called soft engineering The book discusses the ion beam technology emerging from the non equilibrium conditions and emphasizes the power of controlled irradiation to tailor the properties of various types of materials for specific needs

Laser-Surface Interactions for New Materials Production Antonio Miotello, Paolo Ossi, 2009-12-05 This book provides an overview on nanosecond and ultra short laser induced phenomena and the related diagnostics It grew from the lectures of the International School Laser surface interactions for new materials production held in July 2008

[Graphene as Energy Storage Material for Supercapacitors](#)

Inamuddin, 2020-01-20 The book presents a comprehensive review of graphene based supercapacitor technology It focusses on synthesis characterization fundamental properties and promising applications of graphene materials and various types of graphene based composites The wide range of applications include electric power systems of portable electronics hybrid electric vehicles mobile phones etc Keywords Graphene Energy Storage Materials Supercapacitors Micro Supercapacitors Self Healable Supercapacitors Graphene Based ZnO Nanocomposites

Defect Engineered Graphene Materials Electric Power Systems

[Photon-based Nanoscience and Nanobiotechnology](#)

Jan J. Dubowski, Stoyan Tanev, 2007-04-24 Light has always played a significant role in the synthesis of materials and formation of small scale solid structures. The invention of holographic and phase mask projection has enabled engineers to fabricate devices with characteristic features much smaller than the wavelength of the light used for processing. A further reduction of device dimensions has been achieved by implementing the processes that rely strongly on the non linear effects of light matter interaction. The intention of this book was to provide the Reader primarily graduate students and young researchers in materials engineering, bio chem physics, medical physics and biophysics with a set of articles reviewing state of the art research and recent advancements in the field of photon matter interaction for micro nanomaterials synthesis and manipulation of properties of biological and inorganic materials at the atomic level. Photon based nanoscience and related technologies have created exciting opportunities for the fabrication and characterization of nano bio material devices and systems and it is expected to significantly contribute to the development of Nanobiophotonics and Nanomedicine.

Advances in the Application of Lasers in Materials Science Paolo M. Ossi, 2018-10-01 The book covers recent advances and progress in understanding both the fundamental science of lasers interactions in materials science as well as a special emphasis on emerging applications enabled by the irradiation of materials by pulsed laser systems. The different chapters illustrate how by careful control of the processing conditions laser irradiation can result in efficient material synthesis, characterization and fabrication at various length scales from atomically thin 2D materials to microstructured periodic surface structures. This book serves as an excellent resource for all who employ lasers in materials science spanning such different disciplines as photonics, photovoltaics and sensing to biomedical applications.

3D Laser Microfabrication

Hiroaki Misawa, Saulius Juodkazis, 2006-08-21 A thorough introduction to 3D laser microfabrication technology leading readers from the fundamentals and theory to its various potent applications such as the generation of tiny objects or three dimensional structures within the bulk of transparent materials. The book also presents new theoretical material on dielectric breakdown allowing a better understanding of the differences between optical damage on surfaces and inside the bulk as well as a look into the future. Chemists, physicists, materials scientists and engineers will find this a valuable source of interdisciplinary knowledge in the field of laser optics and nanotechnology.
