Math For Every Kid:

Janice VanCleave's Math for Every Kid Janice VanCleave, 1992-04-16 How long is the world's longest earthworm? How tall was a brachiosaurus? What's the average diameter of human hair? What's the circumference of the earth at the equator? Now you can discover the answers to these and other fascinating questions about math. Packed with illustrations, Math for Every Kid uses simple problems and activities to teach you about measurements, fractions, graphs, problem solving, and much more. Using activities that relate math to everyday life, this book will help you feel comfortable with math right from the start. You'll make a sun clock, create a thermometer from a straw, race a paper boat, grow your own bean plant, and even play a game of ring the bottle. Each of the many problems and activities is broken down into its purpose, a list of materials, step-by-step instructions, expected results, and an easy-to-understand explanation. Every activity has been pretested and can be performed safely and inexpensively in the classroom or at home. Harry Briggs, Greg Tang, 2017-03-28 Greg Tang follows up the fun, innovative New York Times bestseller GRAPES OF MATH with his second uproariously punny math book. This time with a theme of seasons and a focus on groups of fives. Your challenge is to find the sum. Without counting one by one? Why not count? It's much too slow. Adding is the way to go. Make clever groups before you start. Then add them in a way that's smart. MATH FOR ALL SEASONS will challenge every kid and every parent to open their minds and solve problems in new and unexpected ways. By looking for patterns, symmetries, and familiar number combinations within eye-catching pictures, math will become easier, quicker, and more fun than anyone could have imagined.

By arranging the pieces of an intriguing Chinese puzzle called a tangram, you'll explore all the different shapes you can form. You'll also learn how to create a colorful 3-D drawing that seems to rise right off the page. And by building a geoboard, you'll discover a quick, fun way to compare the area of different geometric figures.
