

Neighborhood

"Neighborhood" is a word with many different levels of meaning in mathematics.

One of the most general concepts of a neighborhood of a point $x \in \mathbb{R}^n$ (also called an epsilon-neighborhood or infinitesimal [open set](#)) is the set of points inside an n -[ball](#) with center x and [radius](#) $\epsilon > 0$. A set containing an [open neighborhood](#) is also called a neighborhood.

The [graph neighborhood](#) of a vertex v in a [graph](#) is the set of all the vertices adjacent to v generally *including* v itself. More generally, the j th neighborhood of v is the set of all vertices that lie at the distance j from v . The [subgraph](#) induced by the neighborhood of a graph from vertex v (again, most commonly including v itself) is called the [neighborhood graph](#) (or sometimes "ego graph" in more recent literature).

including why and in what ways they may be important for secondary teachers. Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development. Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research. The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra. *Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers* is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics.

Extreme Writing Keen J. Babbage, 2010-03-16 In recent years educators have become increasingly concerned about the writing skills of students in elementary middle and high school. They wonder what can be done to build proper writing skills particularly in a generation of students who may consider text messaging to be the only writing a person needs to do. *Extreme Writing* describes how teachers can build upon the eagerness and skills that students apply to recreational social and friendly writing bringing enjoyment back into writing for students. The *Extreme Writing* approach is not a precise formula for student achievement rather it is a shared discovery of the process the adventure the wonder and the liberation inherent in writing.
