Commutative Algebra - Proceedings Of The Workshop Giuseppe Valla, Ngo Viet Trung, Aron Simis, 1994-08-19 In a relatively short time commutative algebra has grown in many directions Over a period of nearly fifty years starting from the so called homological period till today the area has developed into a rich laboratory of methods structures and problem solving tools One could say a distinct modern trend of commutative algebra is a strong interaction with various aspects of Combinatorics and Computer Algebra This has resulted in a new sense of measuring for old assumptions and a better understanding of old results At the same time Invariant Theory and Algebraic Geometry remain constituents of an everlasting classical source responsible for important themes that have been developed in Commutative Algebra such as deformation linkage algebraic tori and determinantal rings etc This volume of proceedings is well entrenched on the lines of development outlined above As such it aims to keep researchers and mathematicians well informed of the developments in the field

Commutative Algebra Winfried Bruns, Aron Simis, 2006-11-14 The central theme of this volume is commutative algebra with emphasis on special graded algebras which are increasingly of interest in problems of algebraic geometry combinatorics and computer algebra Most of the papers have partly survey character but are research oriented aiming at classification and structural results *Real Algebraic Geometry and Topology* Selman Akbulut, 1995 This book contains the proceedings of the Real Algebraic Geometry Topology Conference held at Michigan State University in December 1993 Presented here are recent results and discussions of new ideas pertaining to such topics as resolution theorems algebraic structures topology of nonsingular real algebraic sets and the distribution of real algebraic sets in projective space Algebra and Topology 1990
