The Orion Complex: A Case Study of Interstellar Matter C.D. Goudis, 2012-12-06 This work deals with some of the most typical complexes of interstellar matter and is intended to serve both as a reference book for the specialist and as an introduction for the newcomer to the field It is hoped to meet the first aim by presenting a holistic view of the well studied complexes in Orion built on information derived from various branches of modern Astrophysics The wealth of published data is presented in the form of photographs contour maps diagrams and numerous heavily annotated tables The second aim is pursued by providing an outline of the complexes the physical problems associated with them the empirical models describing their behaviour and in addition by including an extended Appendix section summarizing the numerous methods employed to derive the physical parameters of an H II region and the dust and molecular cloud physically associated with it The book consists of five chapters and four Appendix sections Chapter 1 which is concerned with the large scale view of the Orion region outlines the morphology of the area and examines in particular the nature of Barnard's Loop and the associated filamentary structure in addition to the origin of the I Orion OB association Chapter 2 focuses on the ionized gas of the Orion H II molecular complex i e *Orion's Guiding Stars* Marc Ladewig, 2017-04-17 [Physics of the Interstellar and Intergalactic Medium](#) Bruce T. Draine, 2011-01-09 An essential resource for graduate students and astrophysicists This is a comprehensive and richly illustrated textbook on the astrophysics of the interstellar and intergalactic medium the gas and dust as well as the electromagnetic radiation cosmic rays and magnetic and gravitational fields present between the stars in a galaxy and also between galaxies themselves Topics include radiative processes across the electromagnetic spectrum radiative transfer ionization heating and cooling astrochemistry interstellar dust fluid dynamics including ionization fronts and shock waves cosmic rays distribution and evolution of the interstellar medium and star formation While it is assumed that the reader has a background in undergraduate level physics including some prior exposure to atomic and molecular physics statistical mechanics and electromagnetism the first six chapters of the book include a review of the basic physics that is used in later chapters This graduate level textbook includes references for further reading and serves as an invaluable resource for working astrophysicists Essential textbook on the physics of the interstellar and intergalactic medium Based on a course taught by the author for more than twenty years at Princeton University Covers radiative processes fluid dynamics cosmic rays astrochemistry interstellar dust and more Discusses the physical state and distribution of the ionized atomic and molecular phases of the interstellar medium Reviews diagnostics using emission and absorption lines Features color illustrations and detailed reference materials in appendices Instructor's manual with problems and solutions available only to teachers

The Universe in Gamma Rays Volker Schönfelder, 2001-08-10 After describing cosmic gamma ray production and absorption the instrumentation used in gamma ray astronomy is explained The main part of the book deals with astronomical results including the somewhat surprising result that the gamma ray sky is continuously changing

Astronomy with Schmidt-Type Telescopes M. Capaccioli, 2012-12-06 The idea of holding a colloquium on Schmidt telescopes techniques and science originated from the observation that in the last ten years and in spite of the remarkable developments and achievements in this field of astronomical research there had been no specific opportunity for the experts to meet together make the point on the state of the art discuss and coordinate future plans Therefore Prof L Rosino one of the pioneers in the use of wide field telescopes driven also by the wish of honouring the over four decades of activity of the Asiago Observatory proposed to the Executive Committee of the International Astronomical Union to sponsor a colloquium on Astronomy with Schmidt type telescopes I to be held at Asiago at the end of the summer of 1983 Details about the composition of the Scientific Organizing Committee and the sponsoring organizations are given in Prof Rosino s Welcome to the Participants The granting of this proposal was the beginning of a number of headaches for the members of the Local Organizing Committee R Barbon F Ciatti P Rafanelli and myself If organizationwise the colloquium was successful this is truly due to the generous efforts of my colleagues of the SOC and to the efficient organization of the Linta Park the hotel hosting the meeting
