Mobile Multimedia Communications David J. Goodman,Dipankar Raychaudhuri,2013-11-11 In 1997 the two hottest topics in information technology are the Internet and mobile communications Each one has the enthusiastic attention of the consuming public investors and the technical community In a time of rapid expansion they both face technical obstacles to meeting the public s high expectations This situation stimulates a high volume of research in both areas To bring the Internet into the twenty first century the research community focuses on multimedia communications in which integrated systems store transport and process many types of information simultaneously A major challenge is to meet the of each information service This problem is separate performance requirements especially challenging when a system has to deliver broadband real time services such as full motion video Meanwhile the mobile communications research community continues its long term struggle against the triple challenge of mobility ether and energy Mobility refers to the changing locations of terminals When terminals are mobile networks have to determine their locations and dynamically establish routes for information The networks also have to rearrange themselves in order to maintain links to terminals with active communications sessions Ether refers to the problems of wireless communications including limited bandwidth rapidly changing radio propagation conditions mutual interference of radio signals and vulnerability of systems to eavesdropping and unauthorized access Energy refers to the fact that portable information devices carry their own power sources The rate at which the batteries of cellular telephones and portable computers drain their energy has a strong effect on their utility

Internet Multimedia Communications Using SIP Rogelio Martinez Perea,2008-02-27 Session Initiation Protocol SIP was conceived in 1996 as a signaling protocol for inviting users to multimedia conferences With this development the next big Internet revolution silently started That was the revolution which would end up converting the Internet into a total communication system which would allow people to talk to each other see each other work collaboratively or send messages in real time Internet telephony and in general Internet

multimedia is the new revolution today and SIP is the key protocol which allows this revolution to grow The book explains in tutorial fashion the underlying technologies that enable real time IP multimedia communication services in the Internet voice video presence instant messaging online picture sharing white boarding etc Focus is on session initiation protocol SIP but also covers session description protocol SDP Real time transport protocol RTP and message session relay protocol MSRP In addition it will also touch on other application related protocols and refer to the latest research work in IETF and 3GPP about these topics 3GPP stands for third generation partnership project which is a collaboration agreement between ETSI Europe ARIB TTC Japan CCSA China ATIS North America and TTA South Korea The book includes discussion of leading edge theory which is key to really understanding the technology accompanied by Java examples that illustrate the theoretical concepts Throughout the book in addition to the code snippets the reader is guided to build a simple but functional IP soft phone therefore demonstrating the theory with practical examples This book covers IP multimedia from both a theoretical and practical point of view focusing on letting the reader understand the concepts and put them into practice using Java It includes lots of drawings protocol diagrams UML sequence diagrams and code snippets that allow the reader to rapidly understand the concepts Focus on HOW multimedia communications over the Internet works to allow readers to really understand and implement the technology Explains how SIP works including many programming examples so the reader can understand abstract concepts like SIP dialogs SIP transactions etc It is not focused on just VoIP It looks At a wide array of enhanced communication services related to SIP enabling the reader put this technology into practice Includes nearly 100 references to the latest standards and working group activities in the IETF bringing the reader completely up to date Provides a step by step tutorial on how to build a basic though functional IP soft phone allowing the reader to put concepts into practice For advanced readers the book also explains how to build a SIP proxy and a SIP registrar to enhance one s expertise and marketability in this fast moving area
