Claudia Prokisch, 2004-04-20 Diploma Thesis from the year 2003 in the subject Business economics General grade 1 3 A Schmalkalden University of Applied Sciences Economics language English abstract The present thesis was prepared in cooperation with the University of the Basque Country in Spain Within a project at its call center CAU I optimized its database that was developed within the software FileMaker Pro 5 0 The call center is located on the campus Guip zcoa in San Sebastian and responsible for all IT matters on the campus Between 12 November 2002 and 22 January 2003 I got an insight into the call center's work improving the existing database This way I was able to make proposals for further optimizations For the improvement of the database I had to learn the software FileMaker Pro that I didn't know before The database improvement was finished with the project on site In contrast to that the analysis and optimization concept for the whole call center went on until the completion of this thesis To avoid to go beyond the scope of this paper the call center analysis that preceded the optimization concept is focused on technical and personnel characteristics The theoretical foundation in this

context is handled in chapter 2 Call Center Specifics In General It provides a view of technological standards and trends as well as characteristics and requirements regarding the human resources which are the most important ones in call centers Chapter 3 then analyzes the call center CAU relating to the theory and describes detailed its original database in FileMaker Pro 5 0 which my work in San Sebastian was focused on The fourth chapter gives suggestions for optimizing the call center work and enhancing its effectiveness Here I tried to stay within the CAU s sphere of influence Otherwise they weren t very useful and not realizable In chapter 5 it is discussed how to put the proposals into action The database modifications and arised problems during their development are explained Finally their effects on the CAU and its work are stated in the summary of chapter 6 [Encyclopedia of the Sciences of Learning](#) Norbert M. Seel,2011-10-05 Over the past century educational psychologists and researchers have posited many theories to explain how individuals learn i e how they acquire organize and deploy knowledge and skills The 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology Beyond folk psychology and its na ve theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories Learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence As a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general As the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely The Encyclopedia of the Sciences of Learning provides an up to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering This modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning More specifically the Encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications The Encyclopedia also contains biographical entries of individuals who have substantially contributed to the
