Topic: Sciences | Words: 889 | Pages: 2

Introduction

Nowadays, multiple regression (MLR) is believed to be an efficient means of analysis of independent configurations. The article under consideration aims at finding the correlation between centralization, digitalization, and structuralization in terms of public procurement. Thus, the authors provide the results attached as a table. By use of MLR, they try to prove that digitalization serves as the most important component to optimize public procurement, whereas structuralization plays no sufficient role in it. As far as centralization is concerned, it has both positive and negative effects on the issue.

Discussion

Actually, it would be reasonable to dwell on the reason why the authors used multiple regression. First of all, centralization, digitalization, and structuralization as economic factors are unlikely to have any visible connection. According to the article, "knowledge about public procurement configuration is still incomplete; many studies investigate the topic with a distinct focus on the private sector" (as cited from Bals, et al., 2018), "but it is questionable if findings fully apply to public administration. A second research gap exists because existing literature on the topic often adopts a country-wide perspective" (as cited from Wang & Li, et al., 2014). Therefore, the regression equation and its statistical significance may be easily shown by the use of a chart.

Secondly, multiple regression is widely used; its principles can be learned and applied without particular knowledge of mathematics. However, some researchers claim that "to fit the entire moderated

Multiple Regression In Practice:

Multiple Regression in Practice William D. Berry, Stanley Feldman, 1985-05 The authors provide a systematic treatment of the major problems involved in using regression analysis. They clearly and concisely discuss the consequences of violating the assumptions of the regression model procedures for detecting violations and strategies for dealing with these problems

Multiple Regression Aki Roberts, John M. Roberts, Jr., 2020-12-16 Multiple Regression A Practical Introduction is a text for an advanced undergraduate or beginning graduate course in statistics for social science and related fields. Also students preparing for more advanced courses can self study the text to refresh and solidify their statistical background. Drawing on decades of teaching this material the authors present the ideas in an approachable and nontechnical manner with no expectation that readers have more than a standard introductory statistics course as background. Multiple regression asks how a dependent variable is related to or predicted by a set of independent variables. The book includes many interesting example analyses and interpretations along with exercises. Each dataset used for the examples and exercises is small enough for readers to easily grasp the entire dataset and its analysis with respect to the specific statistical techniques covered. A website for the book includes SPSS, Stata, SAS, and R code and commands for each type of analysis or recoding of variables in the book. Solutions to two of the end of chapter exercise types are also available for students to practice. The instructor side of the site contains editable PowerPoint slides, other solutions, and a test bank.
