Multiprocessor Execution of Logic Programs Gopal Gupta,2012-12-06 Multiprocessor Execution of Logic Programs addresses the problem of efficient implementation of logic programming languages specifically Prolog on multiprocessor architectures The approaches and implementations developed attempt to take full advantage of sequential implementation technology developed for Prolog such as the WAM while exploiting all forms of control parallelism present in logic programs namely or parallelism independent and parallelism and dependent and parallelism Coverage includes a thorough survey of parallel implementation techniques and parallel systems developed for Prolog Multiprocessor Execution of Logic Programs is recommended for people implementing parallel logic programming systems parallel symbolic systems parallel AI systems and parallel theorem proving systems It will also be useful to people who wish to learn about the implementation of parallel logic programming systems   Multiprocessor Execution of Logic Programs Gopal Gupta,1994-10-31 Addresses the efficient implementation of logic programming languages specifically PROLOG on multiprocessor architectures Develops approaches and implementations aimed at taking full advantage of sequential implementation technology developed for PROLOG while exploiting all forms of control parallelism present in logic programs Covers the analysis of parallel execution models combining independent and parallelism and or parallelism and extensions and variations of the and or model Annotation copyright by Book News Inc Portland OR   **Parallel Execution of Logic Programs** John S. Conery,2012-12-06 This book is an updated version of my Ph D dissertation The AND OR Process Model for Parallel Interpretation of Logic Programs The three years since that paper was finished or so I thought then have seen quite a bit of work in the area of parallel execution models and programming languages for logic programs A quick glance at the bibliography here shows roughly 50 papers on these topics 40 of which were published after 1983 The main difference between the book and the dissertation is the updated survey of related work One of the appendices in the dissertation was an overview of a Prolog implementation of an interpreter based on the AND OR Process Model a simulator I used to get some preliminary measurements of parallelism in logic programs In the last three years I have been involved with three other implementations One was written in C and is now being installed on a small multiprocessor at the University of Oregon Most of the programming of this interpreter was done by Nitin More under my direction for his M S project The other two one written in Multilisp and the other in Modula 2 are more limited intended to test ideas about implementing specific aspects of the model Instead of an appendix describing one interpreter this book has more detail about implementation included in Chapters 5 through 7 based on a combination of ideas from the four interpreters   AND-parallel Execution of Logic Programs on a Shared Memory Multiprocessor: a Summary of Results University of Texas at Austin.
