Multiscale And Multiresolution Methods:

Multiscale and Multiresolution Methods Timothy J. Barth, Tony Chan, Robert Haimes, 2012-12-06 Many computationally challenging problems omnipresent in science and engineering exhibit multiscale phenomena so that the task of computing or even representing all scales of action is computationally very expensive unless the multiscale nature of these problems is exploited in a fundamental way. Some diverse examples of practical interest include the computation of fluid turbulence, structural analysis of composite materials, terabyte data mining, image processing, and a multitude of others. This book consists of both invited and contributed articles which address many facets of efficient multiscale representation and scientific computation from varied viewpoints such as hierarchical data representations, multilevel algorithms, algebraic homogenization, and others. This book should be of particular interest to readers interested in recent and emerging trends in multiscale and multiresolution computation with application to a wide range of practical problems.

Multiscale and Multiresolution Approaches in Turbulence Pierre Sagaut, 2013 The book aims to provide the reader with an updated general presentation of multiscale multiresolution approaches in turbulent flow simulations. All modern approaches (LES, hybrid RANS, LES, DES, SAS) are discussed and recast in a global comprehensive framework. Both theoretical features and practical implementation details are addressed. Some full scale applications are described to provide the reader with relevant guidelines to facilitate a future use of these methods.
