**Server Side Programming** Mukesh Prasad,2013-08-27 To drive a car you don t need to understand how the engine works but if you are a race car driver you should If you have race driver level programming talent this book will take you under the hood of server technologies By showing readers how to write a powerful and usable Java server from scratch and in under 1 000 lines of code this book shows how major technologies can be built from the ground up using bare bones Java It gives readers a tour behind the scenes enabling them to create similar powerful technologies themselves This empowering book is

a must have for serious Java programmers Books and courses on servlets and JSP teach a list of features and how to use them Effectively this is like rote memorization with no deep understanding Because the technologies can be difficult to actually implement the conventional wisdom is that learning by doing is not possible for server side technologies But this book aims to change the status quo in servlet and JSP learning by using an approach that does make learning by doing possible The book actually guides the reader into writing a small Java web server that can not only serve HTML and media pages but implements powerful subsets of servlet and JSP technologies And all this can be done in less than 1 000 lines of code that is right under one thousand LOC with the guidance and technical approach of this book The servlet and JSP subsets implement all the core technology and most of the powerful features This gives the reader actual insight into how and why servlet and JSP features are designed that way and what is the magic going on under the hood The reader will no longer need to rote memorize the features of servlet and JSP and will actually understand them The book is accompanied by a downloadable file This downloadable file includes support code so readers can stay focused on the server technologies without getting side tracked far into string manipulation etc
